excerpt from a text book of clinical anatomy for students and practitioners many changes have taken place in the teaching of anatomy during the past twenty years the rapid development of the various branches of practical medicine and surgery has necessitated a most thorough preparation in the fundamental subjects such as anatomy physiology chemistry and pathology in the majority of our medical schools descriptive anatomy accompanied by dissections is taught during the first two years and then the student feels that he may consider anatomy a closed chapter in but few of the colleges is he taught to take a perspective view or in other words to study regional or topographic anatomy he has spent many hours in the memorizing of nerves arteries veins and the description of viscera but he is unable to apply this knowledge to clinical work the primary object of this book is to serve as a bridge for both practitioner and student from the descriptive anatomy as it is usually taught in the first two years of a medical course to its daily application at the bedside in the clinic or in the operating room the term clinical anatomy seemed to be the most appropriate one to use to express the larger field which the subject covers the term was first employed in this sense by dr a d bevan to convey the fact that clinical anatomy is anatomical knowledge as applied to every branch of clinical work i a not only medicine and surgery in the narrower sense but all the specialties about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
