in the past years genome projects for numerous human parasites have been completed and now allow first in depth comparisons and evolutionary conclusions the genomes of parasites reflect the coevolution with their host metabolic capacities depending on their respective habitat in the host gut parasites usually have an anaerobic metabolism while blood parasites have an aerobic metabolism intracellular parasites escape the immune system while extracellular parasites evade the immune system usually by antigenic variation comprehensive genome data now being available allow us to address profound scientific questions such as which traits enable the parasite to survive in the human host which to cause disease and which can be used as drug targets this book intends to give an overview of the state of knowledge on the molecules of protozoan parasites on their genomes proteomes glycomes and lipidomes

free living amoebae fla are fascinating unicellular eukaryotes living freely in soil and freshwater habitats and feeding mainly on bacteria under stressful conditions they can transform from a motile metabolically active and replicative trophozoite to a dormant and resistant cyst some fla can be pathogenic to humans such as acanthamoeba balamuthia naegleria and sappinia causing rare but fatal infection in humans fla are also known to be carriers of pathogenic microorganisms but few information is currently available on the natural bacteria of fla and how various bacteria avoid phagocytosis predation by these specific types of amoebae there is an imperious need to draw more attention to this group of microorganisms and for this we seek submissions that address advancements in the biology and pathogenesis of flas

banyak penyakit parasit merupakan penyakit yang endemik di indonesia beberapa di antaranya menjadi masalah kesehatan nasional regional maupun masalah kesehatan dunia yang belum dapat diberantas secara tuntas malaria filariasis toksoplasmosis skistosomiasis dan penyakit penyakit protozoa serta penyakit penyakit cacing sulit diatasi karena penyebarannya dipengaruhi banyak hal lingkungan kehidupan manusia misalnya masalah sosial ekonomi yang rendah kekurangan gizi ras pekerjaan iklim dan masalah geografis lainnya serta banyaknya jenis serangga yang dapat menjadi vektor penular penyakit parasit

terutama di daerah tropis dan subtropis yang sukar sekali dikendalikan buku parasitologi klinik ini merupakan salah satu upaya untuk lebih mengenal dan memahami penyakit penyakit parasit terutama yang banyak dijumpai dan menjadi masalah nasional di indonesia maupun penyakitpenyakit parasit lain yang dengan sangat majunya transportasi dan perpindahan populasi manusia dari satu daerah ke daerah lainnya dapat menyebar dari luar indonesia

when professor john sprent first suggested in 1982 that the australian society for parasitology should bid for the opportunity to mount the sixth international congress of parasitology the immediate reaction was one of disbelief however in the two years or so before icopa 5 in toronto he used his considerable powers to the utmost and spent himself unstintingly in persuading australian parasitologists to put together a bid the society inevitably agreed for it is difficult to prevent such a determined and eminent man from getting his own way a case for an australian venue was prepared and as president i was charged with the task of convincing the delegates in toronto that australia was worth going all the way to see the events of that meeting are now far in the past suffice to say that in the end australia won by the narrowest of margins largely due to the energy of my inventive colleagues who put the case for australia at every possible and improbable moment i do not remember a great deal about the scientific aspects of icopa 5 i was far too preoccupied with an awful spectre that of telling john sprent that i had failed to pay attention to much other than lobbying for votes i do remember however telling myself how much i would enjoy the next icopa without the terrible responsibility of capturing icopa 7
