observations plus recipes it has been said that science is the orderly collection of facts about the natural world scientists however are wary of using the word fact fact has the feeling of absoluteness and universality whereas scientific observations are neither absolute nor universal for example children have 20 deciduous baby teeth is an observation about the real world but scientists would not call it a fact some children have fewer deciduous teeth and some have more even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood when they are babies.

and toddlers children have less than 20 visible teeth and as they grow older children begin to lose their deciduous teeth which are then replaced by permanent teeth children have 20 deciduous baby teeth is not even a complete scientific statement for one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth when we say teeth do we mean only those that can be seen with the unaided eye or do we also include the hidden unerupted teeth an observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a scientific statement until its terms are explained scientifically children have 20 deciduous teeth must be accompanied by definitions and qualifiers

writing scientific publications is a fundamental step in the research process furthermore as science becomes more interdisciplinary and the number of journals continues to expand individual papers increasingly need to stand out to be read and have any form of impact it is widely assumed that students and early career scientists will simply acquire the necessary expertise however this could not be further from the truth many early career scientists find writing both intimidating and overwhelming writing is a skill that needs to be learnt and actively developed this novel book s fundamental principle is simple the reader must come first the purpose of a scientific paper is to pass on knowledge and so impactful writing must focus on attracting holding and illuminating readers the authors demonstrate how just a few simple pointers can significantly improve both writing quality and impact they tackle each component of a paper in turn providing a simple framework that makes clear what needs to be included and what doesn t and in what order they also provide advice for writing up different types of science from laboratory experiments to theoretical modelling the focus throughout is on the need to use simple jargon free english and to assume that the reader has little or no prior knowledge in summary the book is about writing better scientific papers that are more likely to be read and have impact scientific papers made easy is targeted at a broad audience of students and professionals across the biological life and human sciences it uses simple biological and human examples that assume no prior knowledge and will resonate with any scientist
