the kurdish movement in turkey s growing alliance with islam one of the fault lines of turkish politics traditionally has been the divide between religious and secular movements however as zeki sarigil argues the secular kurdish movement in turkey has increasingly become aligned with islam as a result islam has become part of the movement s political discourse strategies and actions ethnic boundaries in turkish politics traces the evolving relations between the leftist secular kurdish movement and islam from an apathetic and or antagonistic attitude in the 1970s and 1980s to an increasingly islam friendly approach in the 1990s to an attitude of accommodation and the rise of kurdish islamic synthesis in the early 2000s based on 104 interviews in several provinces in turkey primarily ankara diyarbakir istanbul and tunceli between 2011 and 2015 as well as ethnographic data public opinion surveys and statements from the kurdistan workers party pkk and kurdish leaders sarigil shows how the secular kurdish movement increasingly has been endorsing islam and islamic actors the reasons for this islamic opening are global national and local sarigil demonstrates that a group of strategic and ideological factors have encouraged and or forced kurdish leaders to redraw symbolic and social boundaries of the movement namely with the end of the cold war support for marxist ideas collapsed creating increasingly more favorable responses towards religion in addition the movement s need to expand its social basis and popularity electoral politics and legitimacy struggles against rival political actors were other major factors which triggered the kurdish movement s boundary expansion i e its islamic opening the study also shows that the kurdish boundary making was not without any tension or contestation the boundary expansion by kurdish ethnopolitical elites triggered both internal and external boundary contestations the movement s embrace of islam on a more widespread level has major ramifications for politics in turkey and in the region ethnic boundaries in turkish politics has important insight into the pkk modern turkish and islamic societies and highlights the increasing role of islam in global politics

international frontiers and boundaries separate land rivers and lakes subject to different sovereignties frontiers are zones of varying widths and they were common many centuries ago by 1900 frontiers had almost disappeared and had been replaced by boundaries that are lines the divisive nature of frontiers and boundaries has formed the focus of inter disciplinary studies by economists geographers historians lawyers and political scientists scholars from these disciplines have produced a rich literature dealing with frontiers and boundaries the authors surveyed this extensive literature and the introduction reveals the themes which have attracted most attention following the introduction the book falls into three sections the first section deals systematically with frontiers boundary evolution and boundary disputes the second section considers aspects of international law related to boundaries it includes chapters dealing with international law and territorial boundaries maps as evidence of international boundaries and river boundaries and international law the third section consists of seven regional chapters that examine the evolution of boundaries in the americas the middle east africa asia europe islands off southeast asia and antarctica

how can third world experiences of colonialism and statehood be expressed within the confines of the international court of justice how has the discourse of international law developed to reflect postcolonial realities of universal statehood in a close and critical reading of four territorial disputes spanning the arab world burgis explores the extent to which international law can be used to speak for and speak to non european experiences of authority over territory the book draws on recent critical international legal scholarship to question the ability of contemporary international adjudication to address third world grievances from the past a comparative analysis of the cases suggests that international law remains a discourse only capable of capturing a limited range of non european experiences during and after colonialism

the aim of this book is to understand and critically appraise science based transgression

dynamics in their whole complexity it includes contributions from experts with different disciplinary backgrounds such as philosophy history and sociology thus it is in itself an example of boundary transgression scientific disciplines and their objects have tended to be seen as permanent and distinct however science is better conceived as an activity that constantly surpasses erases and rebuilds all kinds of boundaries either disciplinary socio ethical or ecological this transgressive capacity a characteristic trait of science and its applications defines us as knowledge societies however scientific and technological developments are also sources of serious environmental and social concerns
