the architectural historian and critic kenneth frampton never recovered from the force of hannah arendt s teaching at the new school in new york the philosopher richard j bernstein considers her the most perceptive political theorist and observer of dark times a concept which drawing from brecht she made her own building on the revival of interest in hannah arendt and on the increasing turn in design towards the expanded field of the social this unique book uses insights and quotations drawn from arendt s major writings the human condition the origins of totalitarianism men in dark times to assemble a new kind of lexicon for politics designing and acting today taking 56 terms from action beginnings and creativity through mortality natality and play to superfluity technology and violence and inviting designers and scholars of design world wide to contribute designing in dark times an arendtian lexicon offers up an extraordinary range of short essays that use moments and quotations from arendt s thought as the starting points for reflection on how these terms can be conceived for contemporary design and political praxis neither simply dictionary nor glossary the lexicon brings together designing and political philosophy to begin to create a new language for acting and designing against dark times

how designers think is based on bryan lawson s many observations of designers at work interviews with designers and their clients and collaborators this extended work is the culmination of forty years research and shows the belief that we all can and do design and that we can learn to design better the creative mind continues to have the power to surprise and this book aims to nurture and extend this creativity neither the earlier editions nor this book are intended as authoritative prescriptions of how designers should think but provide helpful advice on how to develop an understanding of design in this fourth edition bryan lawson continues to try and understand how designers think to explore how they might be better educated and to develop techniques to assist them in their task some chapters have been revised and three completely new chapters added the book is now intended to be read in conjunction with what designers know which is a companion volume some of the ideas previously discussed in the third edition of how designers think are now explored more thoroughly in what designers know for the first time this fourth edition works towards a model of designing and the skills that collectively constitute the design process

empowered design is about creating the life you are meant to live starting from the inside out design is all encompassing from creating a passionate plan for life to your personal space supporting your energy let s face it designers are like therapists and we are the go to people for our clients not only for style but for life advice well it takes hard work and determination to live your best life design has been my life for over twenty years and i realized that designing the life we are meant to live is connected to the space we live in my book is about creating a passionate plan that will start with figuring out what direction will empower you and not drain you it s important to understand the difference between the white noise that creates fear and the fear that tells you that you re on the right track fear doesn t scream at you it whispers most of the time everyone is afraid of anything worth doing but how you react to that fear can be a game changer one way that i can tell the difference between the two is if i were to imagine i was given the same opportunity that i was afraid of except this time i was guaranteed that i could not fail would you still want to do it you see knowing the difference between how your feelings and your body reacts to different situations is at the core of fine tuning your barometer you can t make the right decisions if you don t know the difference between the feeling of the right road or the wrong road it seems so simple but you would be surprised at how much people make decisions that they think are right but really they just chose the less scary and easy route i m not inventing the wheel but i am infusing a lot of old world knowledge and common sense with my own stories of how i moved past obstacles and how i m still pushing past the obstacles that get in my way i think that it s really easy to let the experiences in your life define your life when life gives you obstacles you need to use them as your own stepping stones i am a fusion of interior design and energy design and so my book will be a fusion of the two that make up what i call empowered design now most of us know what interior design is but i m sure you re wondering what in god s name energy design is and no i m not referring to green or energy efficient design i refer to energy design as the designing of the emotional and non physical space that surrounds you or that affects you on a daily basis it s about taking your emotional pulse so that you can make choices that will build you up and not bring you down this calls for self awareness where you step away from yourself enough to be the watcher instead of the reactor i have made a commitment to live my life on purpose and i believe that i can show readers that there are no boundaries to achieving great personal success it looks different to all of us and it s what makes your space and your journey unique the life we are all meant to live is as much about how you feel to what your space looks like when you wake up in the morning it s as simple as if your house is cluttered then your brain feels cluttered so i ask you does your space feel authentic and does it support who you are but i guess a better question to ask yourself is does your life feel authentic to who you are and who you want to be if the answer isn t a hard yes then we ve got work to do

interactive technology is increasingly integrated with physical objects that do not have a traditional keyboard and mouse style of interaction and many do not even have a display these objects require new approaches to interaction design referred to as post wimp windows icons menus and pointer or as embodied interaction design this book provides an overview of the design opportunities and issues associated with two embodied interaction modalities that allow us to leave the traditional keyboard behind tangible and gesture interaction we explore the issues in designing for this new age of interaction by highlighting the significance and contexts for these modalities we explore the design of tangible interaction with a reconceptualization of the traditional keyboard as a tangible keyboard and the design of interactive three dimensional 3d models as tangible models we explore the design of gesture interaction through the design of gesture base commands for a walk up and use information display and through the design of a gesture based dialogue for the willful marionette we conclude with design principles for tangible and gesture interaction and a call for research on the cognitive effects of these modalities
