**Natural Science** 1894 in the wake of the second world war internationalists identified science as both the cause of and the solution to world crisis unless civilization learned to control the unprecedented powers science had unleashed global catastrophe was imminent but the internationalists found hope in the idea of world government in the postwar origins of the global environment perrin selcer argues that the metaphor of spaceship earth the idea of the planet as a single interconnected system exemplifies this moment when a mix of anxiety and hope inspired visions of world community and the proliferation of international institutions selcer tells the story of how the united nations built the international knowledge infrastructure that made the global scale environment visible experts affiliated with un agencies helped make the global as in global population global climate and global economy an object in need of governance selcer traces how un programs such as unesco s arid lands project the production of a soil map of the world and plans for a global environmental monitoring system fell short of utopian ambitions to cultivate world citizens but did produce an international community of experts with influential connections to national governments he shows how events and personalities cultures and ecologies bureaucracies and ideologies decolonization and the cold war interacted to make global knowledge a major contribution to global history environmental history and the history of development this book relocates the origins of planetary environmentalism in the postwar politics of scale Natural Science 1899 shigeru nakayama has been at the forefront of redirecting conventional east asian science and technology arguing that orientation of science refers not only to the direction of science but also implies a turning to eastern science recently he has been arguing for implementation of a service science linked to rights and needs of mankind

Proceedings of the Academy of Natural Sciences of Philadelphia 1939 gorilla pathology and health with a catalogue of preserved materials consists of two cross referenced parts the first the book itself is a review of pathological changes and tissue responses in gorillas gorilla gorilla and g beringei with an emphasis on free living animals but also with reference to those in captivity the comparative aspects are discussed stressing the relevance of research to both gorillas and humans what makes the publication truly unique however is the second part a comprehensive descriptive catalogue of the location and nature of gorilla material in museums and scientific institutions throughout the world this is of great consequence because free living gorillas are strictly conserved with restricted access so the location of a wealth of preserved tissues and other material that has been collected over the decades is a great benefit for research and study this book can and should be used to gain cardinal knowledge regarding the biology and pathology of this genus the combination of book and catalogue in this extensive compilation makes it an invaluable tool for all those concerned with the health welfare and conservation of gorillas one of our nearest living relatives brings together studies data and clinical practice from difficult to access or obscure journals and ngo reports in different languages for all interested parties and practitioners provides perspectives on existing research in gorilla pathology both for those studying conservation practices and those seeking an understanding of comparable diseases in humans includes illustrative figures on gross and microscopic pathological changes museum specimens photos of field necropsy and techniques and examples of laboratory tests features an extensive list of references and further reading in

different languages incorporates a comprehensive descriptive catalogue of gorilla material from around the world

Proceedings of the Academy of Natural Sciences of Philadelphia 1970 this book argues that it is possible for our study of the natural world to enhance our understanding of god and for our faith to inform and influence our study and application of science whether you are a student someone employed in the sciences or simply an interested layperson not just science will help you develop the crucial skills of critical thinking and reflection about key questions in christian faith and natural science the contributors provide a systematic approach to both raising and answering the key questions that emerge at the intersection of faith and various disciplines in the natural sciences among the questions addressed are the context limits benefits and practice of science in light of christian values questions of ethics as they relate to various applied sciences are also discussed the end goal is an informed biblical worldview on both nature and our role in obeying god s mandate to care for his creation with an honest approach to critical questions not just science fills a gap in the discussion about the relationship between faith and reason this is a most welcomed addition to these significant scholarly conversations ron mahurin phd vice president professional development and research council for christian colleges universities

<u>Newsletter</u> 1980 at the crossroads of science and art this catalogue compares the main milestones of scientific discoveries with their parallels in the collective imagination featuring 300 works which testify on the influence of scientific discoveries on the imagination and art of the 19th century accompanies an exhibition at musée d orsay in paris december 2020 may 2021 the exhibition has been organized with the montréal museum of fine arts canada which will take place from june 27 september 2021the 19th century saw an unprecedented development of the natural sciences darwinian theory questions the origins of man his place in nature his links with animals and his own animality in a world now understood as an ecosystem this upheaval in the sciences as well as the public debates throughout the century deeply influenced the artists the musée d orsay and the musée des beaux arts de montréal are devoting an exhibition to the intersection of science and the arts for the

first time in partnership with the national museum of natural history in paris which will retrace the themes of this questioning and will confront the main milestones of scientific discoveries with their parallel in the art **Circulars** 1882 beautifully written reveals the vicissitudes of an extraordinarily interesting life michael j neufeld author of von braun dreamer of space engineer of war willy ley has been a mystery among spaceflight historians for many years his role as science writer advocate and popularizer is known to many but understood by few this book unpacks that story roger d launius associate director of collections and curatorial affairs national air and space museum ley lit the fire of interplanetary enthusiasm in the hearts of generations of young space cadets long overdue this biography establishes the details and the ups and downs of his career tom d crouch author of lighter than air an illustrated history of balloons and airships beyond recovering the fascinating and many contradictory aspects of ley's extraordinary life buss has provided a valuable case study of the complex relationship between science popularization mass media and scientific advocacy in the twentieth century asif a siddigi author of the red rockets glare spaceflight and the soviet imagination 1857 1957 willy ley inspired young rocket scientists and would be astronauts around the world to imagine a future of interplanetary travel long before space shuttles existed this is the first biography of the science writer and rocketeer who predicted and boosted the rise of the space age born in germany ley became involved in amateur rocketry until the field was taken over by the nazis he fled to america where he forged a new life as a weapons expert and journalist during world war ii and as a rocket researcher after the war as america s foremost authority on rockets missiles and space travel he authored books and scientific articles while also regularly writing for science fiction pulp magazines and publishing what he termed romantic zoology a blend of zoology cryptozoology history and mythology he even consulted for television s tom corbett space cadet and the disney program man in space thrilling audiences with a romanticized view of what spaceflight would be like yet as astronauts took center stage and scientific intellectuals such as wernher von braun became influential during the space race ley lost his celebrity status with an old fashioned style of popular writing and eccentric perspectives influenced by romanticism and science fiction he was ignored by younger historians this book

returns willy ley to his rightful place as the energizer of an era a time when scientists and science popularizers mixed ranks and shared the spotlight so that our far fetched fantastic dreams could turn into the reality of tomorrow

**The Johns Hopkins University Circular** 1882 a pivotal figure of modern isotericism rudolf steiner 1861 1925 was a clairvoyant and supersensitive with a scientific and philosophical education he believed that man can gain objective knowledge of higher worlds and apply these insights to all fields of human activity anthroposophy the path of wisdom and knowledge he intiated plots man s struggle to attain full spiritual development through the practical application of the forces brought by christ steiner saw the spirit as the creative element in evolution and his work is increasingly accepted as a practical vitalizing force for today s world
