this springerbrief discusses the most recent research in the field of multimedia goe evaluation with a focus on how to evaluate subjective multimedia goe problems from objective techniques specifically this springerbrief starts from a comprehensive overview of multimedia goe definition its influencing factors traditional modeling and prediction methods subsequently the authors introduce the procedure of multimedia service data collection preprocessing and feature extractions then describe several proposed multimedia goe modeling and prediction techniques in details finally the authors illustrate how to implement and demonstrate multimedia goe evaluation in the big data platform this springerbrief provides readers with a clear picture on how to make full use of multimedia service data to realize multimedia goe evaluation with the exponential growth of the internet technologies multimedia services become immensely popular users can enjoy multimedia services from operators or content providers by tv computers and mobile devices user experience is important for network operators and multimedia content providers traditional gos quality of service can not entirely and accurately describe user experience it is natural to research the quality of multimedia service from the users perspective defined as multimedia quality of experience goe however multimedia goe evaluation is difficult because user experience is abstract and subjective hard to quantify and measure moreover the explosion of multimedia service and emergence of big data all call for a new and better understanding of multimedia goe this springerbrief targets advanced level students professors and researchers studying and working in the fields of multimedia communications and information processing professionals industry managers and government research employees working in these same fields will also benefit from this springerbrief

this book contains four keynote abstracts and 83 best peer reviewed papers selected from the 179 submissions at the 2nd international conference on

advances in ict icta 2023 which share research results and practical applications in ict research and education technological changes and digital transformation that have taken place over the past decade have had significant impacts on all economic and social sectors information and communication technology ict in general and artificial intelligence ai in particular have driven socio economic growth the topics cover all ict related areas and their contributions to socio economic development focusing on the most advanced technologies such as ai researchers and practitioners in academia and industry use the books as a valuable reference for their research activities teaching learning and advancing current technologies the conference is hosted by thai nguyen university of information and communication technology ictu

<u>Users Manual for an Open-channel Streamflow Model</u> <u>Based on the Diffusion Analogy</u> 1994

this monograph develops a generalised energy flow theory to investigate non linear dynamical systems governed by ordinary differential equations in phase space and often met in various science and engineering fields important nonlinear phenomena such as stabilities periodical orbits bifurcations and chaos are tack led and the corresponding energy flow behaviors are revealed using the proposed energy flow approach as examples the common interested nonlinear dynamical systems such as duffing s oscillator van der pol s equation lorenz attractor rössler one and sd oscillator etc are discussed this monograph lights a new energy flow research direction for nonlinear dynamics a generalised matlab code with user manuel is provided for readers to conduct the energy flow analysis of their nonlinear dynamical systems throughout the monograph the author continuously returns to some examples in each chapter to illustrate the applications of the discussed theory and approaches the book can be used as an undergraduate or graduate textbook or a comprehensive source for scientists researchers and engineers providing the statement of the art on energy flow or power flow theory and methods

the wireless community is on the verge of the standardization of fourth generation 4g systems research has generated a number of solutions for significant improvement of system performance the development of enabling technologies such as adaptive coding and modulation iterative turbo decoding algorithms and space time coding means that industry can now implement these solutions advanced wireless communications 4g technologies focuses on the system elements that provide adaptability and reconfigurability and discusses how these features can improve 4g system performance there are several different systems comprising 4g including adaptive wcdma wideband code division multiple access atdma adaptive time division multiple access multicarrier ofdma and ultra wide band uwb receiver elements this book provides a comparative study of these technologies and focuses on their future co existence topics covered include space time coding including discussions on diversity gain the encoding and transmission sequence the combining s cheme and ml decision rule for two branch transmit diversity

scheme with one and m receivers ultra wide band radio uwb multiple access in gaussian channels the uwb channel uwb system with m ary modulation m ary ppm uwb multiple access coded uwb schemes multi user detection in uwb radio uwb with space time processing and beam forming for uwb radio antenna array signal processing with focus on space time receivers for cdma communications music and esprit doa estimation joint array combining and mlse receivers joint combiner and channel response estimation and complexity reduction in the wide band beam forming channel modeling and measurement adaptive mac adaptive routing and tcp layer are also addressed this book will supply the reader with a comprehensive understanding of the relationship between the systems performance its complexity reliability and cost effectiveness it gives an insight into the impact of existing and new technologies on the receiver structure and provides an understanding of current approaches and evolving directions for personal and indoor communication

applied systems and cybernetics volume v systems approaches in computer science and mathematics covers the proceedings of the international congress on applied systems research and cybernetics this book discusses trends and advances in the application of systems science and cybernetics to various fields this volume reviews the systems approaches in computer science and mathematics and concentrates on several major areas of systems research in computer science and theoretical and applied mathematics this book will be of great interest to computer scientists interested in the development of the theories and applications of computer science

these selected readings bring together introductory and advanced papers on various wireless applications of spread spectrum technology the papers are grouped into sections according to the application areas spread spectrum

technology cellular mobile systems satellite communications wireless local area networks and the global positioning system gps

UNIX User's Handbook 2002

while a decade ago much of the discussion of new media in asia was couched in occidental notions of asia as a default setting for technology in the future today we are seeing a much more complex picture of contesting new media practices and production as new media becomes increasingly an everyday reality for young and old across asia through smartphones and associated devices boundaries between art new media and the everyday are transformed this handbook addresses the historical social cultural political philosophical artistic and economic dimensions of the region s new media through an interdisciplinary revision of both new media and asia the contributors provide new insights into the complex and contesting terrains of both notions the routledge handbook of new media in asia will be the definitive publication for readers interested in comprehending all the various aspects of new media in asia it provides an authoritative up to date intellectually broad conceptually cutting edge guide to the important aspects of new media in the region as the first point of consultation for researchers advanced level undergraduate and postgraduate students in fields of new media and asian studies
