highly recommended for iit jee and olympiads 1000 problems with solutions and 100 articles this book collects together the problems set out at end of each chapter in the author s textbook of plane trigonometry along with the possible solutions which are linked with an explanation of the sort of reasoning used in order to arrive at one of the answers in many cases several answers are given for one question the result is a book which can be used independently of the main volume this book helps in acquiring a better understanding of the basic principles of plane trigonometry and in revising a large amount of the subject matter quickly it is also to be noticed that each example or problem is here enunciated at the head of its solution as well as all the relevant articles are part of the appendix so that the book though a fitting companion to the textbook is not inseparable from it but may be used as a book of exercises with any other treatise on plane trigonometry we are grateful for this opportunity to put the materials into a consistent format and to correct errors in the original publication that have come to our attention we are highly indebted to chandra shekhar kumar for the fruitful discussions which

led to the idea of masterminding this entire project he helped us put hundreds of pages of typographically difficult material into a consistent digital format the process of compiling this book has given us an incentive to improve the layout to double check almost all of the mathematical rendering to correct all known errors to improve the original illustrations by redrawing them with till tantau s marvelous tikz thus the book now appears in a form that we hope will remain useful for at least another generation

this monograph considers the evaluation and expression of measurement uncertainty within the mathematical framework of the theory of evidence with a new perspective on the metrology science the text paves the way for innovative applications in a wide range of areas building on simona salicone s measurement uncertainty an approach via

the mathematical theory of evidence the material covers further developments of the random fuzzy variable rfv approach to uncertainty and provides a more robust mathematical and metrological background to the combination of measurement results that leads to a more effective rfv combination method while the first part of the book introduces measurement uncertainty the theory of evidence and fuzzy sets the following parts bring together these concepts and derive an effective methodology for the evaluation and expression of measurement uncertainty a supplementary downloadable program allows the readers to interact with the proposed approach by generating and combining rfvs through custom measurement functions with numerous examples of applications this book provides a comprehensive treatment of the rfv approach to uncertainty that is suitable for any graduate student or researcher with interests in the measurement field

started on the inspired initiative of prof alfred strohmeier back in 1996 and spawned from the annual ada europe conference that had previously run for 16 consecutive years the international conference on reliable software technologies celebrated this year its tenth anniversary by going to york uk where the rst series of technical meetings on ada were held in the 1970s besides being a beautiful and historical place in itself york also hosts the department of computer science of the local university whose real time group has been tremendously influential in shaping the ada language and in the progress on real time computing worldwide this year s conference was therefore put together under excellent auspices in a very important year for the ada community in view of the forthcoming completion of the revision process that is upgrading the language standard to face the challenges of the new millennium the conference took place on june 20 24 2005 it was as usual sponsored by ada europe the european federation of national ada societies in cooperation with acm sigada

the conference was organized by selected staff of the university of york teamed up with collaborators from various places in europe in what turned out to be a very effective instance of distributed collaborative processing the conference also enjoyed the generous support of 11 industrial sponsors
