sustainable mobility has become the new imperative for transport policy there have been a number of policy attempts at sustainable mobility globally such as the development of more efficient conventional transport technologies the promotion of efficient and affordable public transport systems and the encouragement of environmental awareness such

policies have so often been presented as prerequisites for sustainable mobility that they are now taken for granted but are any of these policies really successful to what extent do they actually contribute or fail to contribute to sustainable mobility why do some policies succeed and others fail using an interdisciplinary approach which brings together various theories and methodologies this book tests each of these policies or hypotheses as the author sees them with detailed empirical investigations it also argues that leisure time travel should be included in any sustainable mobility policies as it now accounts for 50 per cent of all annual travel distance in developed countries the book concludes by suggesting fourteen theses of sustainable mobility for the eu and a new model for future best practice
