abstract the smartphone market is evolving rapidly irrespective of the
well known spread within the business sector in recent years the
average users tend to replace their traditional mobile phones pdas and
palms with smartphones these devices have become a pervasive part of
everyday life dealing with huge amounts of data the mobile device s
and application s demand for certain security standards cannot be
underestimated in recent studies the individual user s needs in terms
of technical features applications etc have not been addressed and
analyzed properly to capture the problem in its full extent it is
vital to understand the user s expectations besides the usage patterns
have to be described especially against the background of security
aspects as mentioned before recent analyzes did not specifically ask
what the user expects from a smartphone hence the main objective of
this work is to get a broad picture on how smartphones are used today
and what users expect taking into consideration security aspects an
international web based online survey was designed and performed to
measure and analyze users behaviour when using smartphones with the
aim of finding out what they want and expect from a smartphone the
main goals were to identify user needs in the context of smartphones
to analyze their knowledge and acquisition to security aspects and to
get significant data about the user s behaviour the main findings of
the survey are that on the one hand most of the users want a
smartphone to provide classic mobile phone features such as performing
phone calls writing messages or storing contacts on the other hand
they want a smartphone to provide mobile internet access navigation
features multimedia aspects a comfortable usability and a good lo

mobile technologies have become a staple in society for their
accessibility and diverse range of applications that are continually
growing and advancing users are increasingly using these devices for
activities beyond simple communication including gaming and e commerce
and to access confidential information including banking accounts and

medical records while mobile devices are being so widely used and accepted in daily life and subsequently housing more and more personal data it is evident that the security of these devices is paramount as mobile applications now create easy access to personal information they can incorporate location tracking services and data collection can happen discreetly behind the scenes hence there needs to be more security and privacy measures enacted to ensure that mobile technologies can be used safely advancements in trust and privacy defensive strategies and steps for securing the device are important foci as mobile technologies are highly popular and rapidly developing the research anthology on securing mobile technologies and applications discusses the strategies methods and technologies being employed for security amongst mobile devices and applications this comprehensive book explores the security support that needs to be required on mobile devices to avoid application damage hacking security breaches and attacks or unauthorized accesses to personal data the chapters cover the latest technologies that are being used such as cryptography verification systems security policies and contracts and general network security procedures along with a look into cybercrime and forensics this book is essential for software engineers app developers computer scientists security and it professionals practitioners stakeholders researchers academicians and students interested in how mobile technologies and applications are implementing security protocols and tactics amongst devices

as intelligent autonomous agents and multiagent system applications become more pervasive it becomes increasingly important to understand the risks associated with using these systems incorrect or inappropriate agent behavior can have harmful effects including financial cost loss of data and injury to humans or systems for example nasa has proposed missions where multiagent systems working in space or on other planets will need to do their own reasoning about safety issues that concern not only themselves but also that of their mission likewise industry is interested in agent systems that can search for new supply opportunities and engage in semi automated negotiations over new supply contracts these systems should be able to securely negotiate such arrangements and decide which credentials can be requested and which credentials may be disclosed such systems may encounter environments that are only partially understood and where they must learn for themselves which aspects of their environment are safe and which are dangerous thus security and safety are two central issues when developing and deploying such systems we refer to a multiagent system's security as the ability of the system to deal with threats that are intentionally caused by other intelligent agents and or systems and the system's safety as its ability to deal with any other threats to its goals
