## From Plant Genomics to Plant Biotechnology

2013-08-31

Plant genomics and plant biotechnology are two fields that have grown rapidly in the past few years. Plant genomics is the study of the genome of a plant, and plant biotechnology is the use of genetic engineering to create new plant varieties. Both fields have the potential to revolutionize agriculture and food production. In this article, we will explore the relationship between plant genomics and plant biotechnology, and how they are being used to create new plant varieties that are more resistant to disease and drought, and that produce higher yields of food crops.
