A Process Theory of Organization *2014*

this book focuses on the state of organization theory its purpose object and practical relevance in recent years disquiet has mounted within the field of organizational analysis broadly defined about the overly theoretical and a or anti organizational state of organization theory and its consequent lack of practical purchase not least in the light of pressing economic social and political concerns that are often profoundly organizational in nature the book argues that predominant contemporary modes of theorising within the field and in particular the stance associated with them have had the effect of occluding and dissolving organization theory s core object formal organization and as a consequence dissipating its practical focus and reach the book seeks to contribute to the goal of reviving organization theory as a practical science of organizing and rehabilitating its core object formal organization through a re examination and re assessment of the outlook comportment and attitude stance animating its

classical antecedents this ambition is double edged for not only
does it seek to revive organization theory through reconnecting it
with the practical orientation framing classical organizational
analysis it also seeks to indicate how the historic products of that
orientation or stance still have considerable traction for analysing
and intervening in contemporary matters of organizational
concern not least this classical organizational stance provides
those who adopt it with a method with which to orient themselves
both in formal organizational thought and in formal organizational
life it furnishes them with an ethos combining both practical
rationality and ethical seriousness in this sense the book suggest
itself both as a guide to doing organizational analysis and doing
practical organization

an important challenge to organization theory is to search for constructs that explain how contexts for work emerge evolve persist and change this book explores the concept of space as representing a wide variety of contexts organization as a process as distinguished from organization as an entity is seen as the construction of space where space is the outcome of human action and interaction as well as providing a context for actions and interaction the book shows how different forms of space lie at

the base of a number of developments in organization theory it then takes the step to show how contemporary developments in social science represented by works by writers such as giddens luhmann latour and bourdieu can be used to establish a dynamic understanding of organization as space insights from these discussions are used to establish a unique and coherent way of understanding complexities of modern organization
