there is a paradox lying at the heart of the study of heredity to understand the ways in which features are passed on down from one generation to the next we have to dig deeper and deeper into the ultimate nature of things from organisms to genes to molecules and yet as we do this increasingly we find we are

out of focus with our subjects what has any of this to do with the living breathing organisms with which we started organisms are living molecules are not how do we relate one to the other in genetic analysis one of the most important empirical scientists in the field in the twentieth century attempts through a study of history and drawing on his own vast experience as a practitioner to face this paradox head on his book offers a deep and innovative understanding of our ways of thinking about heredity
