Proceedings of the American Power Conference 1996

the fifth annual international symposium on the super collider was a great success over 700 participants from around the country and the world gathered on may 6 8 1993 in san francisco to mark the progress of the ssc to discuss current issues and to chart a course of action for the continued development of our understanding of basic subatomic matter together the american public academic communities private sectors and governments from around the world have embarked on a project critical to maintaining our nation's preeminence as the world's leader in basic scientific research and the practical application of scientific knowledge america has long maintained a commitment to investing in our nation's future the super collider represents an essential next step in the direction of scope of human knowledge the theme of the conference reflects these important goals ssc focusing the world on next generation science the challenge for us today is to spread the message of the

importance of investing in america s future this is our task and the task of supporters of the super colliderthroughout the nation without employing all of our energies our nation will miss an historic opportunity to ensure america s scientific technological and economic leadership in the years ahead as we enter the next millennium

Investigation on Mechanical Anchorage for Shear Rehabilitation of Continuous Reinforced Concrete T-beams with CFRP Externally Bonded Stirrups 2002

rehabilitation of civil works hydraulic concrete structures such as navigation locks or stilling basins commonly involves the removal of defective concrete and replacement with new concrete steel reinforcing anchors are normally embedded into the base concrete to assist in the attachment of the base concrete to the new concrete with respect to bonding the steel anchors into the base concrete this investigation was conducted to evaluate the effectiveness of cementitious vinylester and epoxy grouts in bonding embedment of the anchors tensile pullout and long term creep strain tests were accomplished in this study in correlation with

parameters for dry and wet environments and for bond maturity ages of 1 3 7 and 28 days and 1 year tests results indicated all of the grout materials developed sufficient bond strength in pullout and creep tests for dry applications with the exception of one epoxy material however for submerged applications the epoxy grouts exhibited poor developed bond strength in both pullout and creep tests as a result particular caution is recommended for the application of epoxy grouts to embed steel anchors in hardened concrete under submerged conditions

Investigation on Mechanical Anchorage for Shear Rehabilitation of Continuous Reinforced Concrete T-beams with CFRP Externally Bonded Stirrups 2002

in 2003 there were 38 metal truss bridges 50 years of age or older remaining on the state of texas highway system of these 38 bridges 33 are listed in the national register of historic places many of these bridges do not meet current design criteria for rehabilitation due to narrow deck widths low vertical clearance and substandard load capacity in addition the existing bridge railing systems on these bridges have not been shown to meet the current requirements for safety and

strength this project addressed the design and performance of acceptable traffic railings for existing and new truss bridges in texas specific objectives were to design develop a retrofit railing for low speed application on the roy b inks bridge in llano texas design develop a retrofit railing for high speed application on the u s 281 bridge over the brazos river in palo pinto county texas identify criteria that can serve as a basis for design exceptions and design develop a traffic railing for new truss bridges
