Monthly Catalog of United States Government Publications 1997-07 algae abstracts is the first in a series of bibliographies on water resources and pollution published by the International Plenum Data Corporation in cooperation with the Water Resources Scientific Information Center. It is produced wholly from the information base comprising material abstracted and indexed for selected water resources abstracts. The bibliography is divided into volumes according to the publication dates of the source documents. Volume 1 contains 569 abstracts covering publication dates up to and including 1969. Volume 2 contains 730 abstracts covering the years 1970 to 1972. The material included in this bibliography represents computer selections based on the presence of a form of the word "alga" somewhere in the referenced citation. Substantively, the material typifies WRSIC's Centers of Competence approach to information support of the Office of Water Resources Research, OWRR, of the Department of the Interior. Most of the references in this bibliography are the work of the Center of Competence on Eutrophication at the University of Wisconsin. The indexes refer to the WRSIC accession number which follows each abstract. The significant descriptor index is made up of a fraction of the total descriptors and identifiers by which each paper has been indexed. It represents weighted terms that best describe the information content. This status is indicated by the asterisks which precede them. The general index includes all the remaining descriptors and identifiers by which each paper in this bibliography has been indexed.

INIS Atomindex 1986 heavy oil recovery and upgrading covers properties, factors, methods, and all current and upcoming processes giving engineers new and experienced the full spectrum of recovery choices including sagd, horizontal well technology, and hybrid approaches. Moving on to the upgrading and refining of the product, the book also includes information on in situ upgrading, refining options, and hydrogen production, rounding out with environmental effects, management methods on refinery waste, and the possible future configurations within the refinery. This book provides engineers with a single source to make decisions and manage the full range of challenges. Presents the properties, mechanisms, screening criteria, and field applications for heavy oil enhanced recovery projects. Includes current upgrading options and future methods for refining heavy oil development. Fills in the gaps between literature and practical application for everyday industry reference.
