Advanced Technologies for Meat Processing

1998

as with the first edition the main goal of advanced technologies for meat processing is to provide the reader with recent developments in new advanced technologies for the full meat processing chain this book is written by distinguished international contributors with recognized expertise and excellent reputations and brings together all the advances in a wide and varied number of technologies that are applied in different stages of meat processing this second edition contains 21 chapters combining updated and revised versions of several chapters with entirely new chapters that deal with new online monitoring techniques like hyperspectral imaging and raman spectroscopy the use of nanotechnology for sensor devices or new packaging materials and the application of omics technologies like nutrigenomics and proteomics for meat quality and nutrition the book starts with the control and traceability of genetically modified farm animals followed by four chapters reporting the use of online non destructive monitoring techniques like hyperspectral imaging and raman spectroscopy real time pcr for pathogens detection and nanotechnology based sensors then five chapters describe different advanced technologies for meat decontamination such as irradiation hydrostatic and hydrodynamic pressure processing other non thermal technologies and the reduction in contaminants generation nutrigenomics in animal nutrition and production is the object of a chapter that is followed by five chapters dealing with nutritional related issues like bioactive peptides functional meats fat and salt reduction processing of nitrite free products and the use of proteomics for the improved processing of dry cured meats the last four chapters are reporting the latest developments in bacteriocins against meat borne pathogens the functionality of bacterial starters modified atmosphere packaging and the use of new nanotechnology based materials for intelligent and edible packaging

scarcity is considered a ubiquitous feature of the human condition it underpins much of modern economics and is widely used as an explanation for social organisation social conflict and the resource crunch confronting humanity s survival on the planet it is made out to be an all pervasive fact of our lives be it of housing food water or oil but has the conception of scarcity been politicized naturalized and universalized in academic and policy debates has overhasty recourse to scarcity evoked a standard set of market institutional and technological solutions which have blocked out political contestations overlooking access as a legitimate

focus for academic debates as well as policies and interventions theoretical and empirical chapters by leading academics and scholar activists grapple with these issues by questioning scarcity s taken for granted nature they examine scarcity debates across three of the most important resources food water and energy and their implications for theory institutional arrangements policy responses and innovation systems the book looks at how scarcity has emerged as a totalizing discourse in both the north and south the scare of scarcity has led to scarcity emerging as a political strategy for powerful groups aggregate numbers and physical quantities are trusted while local knowledges and experiences of scarcity that identify problems more accurately and specifically are ignored science and technology are expected to provide solutions but such expectations embody a multitude of unexamined assumptions about the nature of the problem about the technologies and about the institutional arrangements put forward as a fix through this examination the authors demonstrate that scarcity is not a natural condition the problem lies in how we see scarcity and the ways in which it is socially generated
