the cover of this book depicts a lamassu one of the fabulous beasts of mythology like many similar creatures such as the chimera griffon hippocamp and cockatrice the body of the lamassu was clearly a combination of structures derived from several different species in other words it provides a highly successful example of xenotransplantation but in selecting a symbol of xenotransplantation to grace the cover of this volume why choose the lamassu in preference to the other ancient beasts the reason is that the lamassu appears to have been endowed with a much

fig 1 homer described the chimera as consisting of a lion s foreparts a goat in the middle and a serpent s hind parts viii foreword fig 2 the griffon had the foreparts of an eagle and the rear tail and hindlegs of a lion its eagle like head had pointed upstanding ears like those of an ass feathers grew upon its head neck and chest and the rest of its body was covered in leonine fur more benign and desirable character than many of its mythological associates for example reliable reports state that the chimera fig 1 hitherto the animal most commonly selected to symbolize xenografting killed everyone who came within range of its fiery breath perhaps not surprisingly therefore the chimera is variously described as one of the largest monsters ever born a savage creature and a symbol of complex evil
