marginalism and discontinuity is an account of the culture of models employed in the natural and social sciences showing how such models are instruments for getting hold of the world tools for the crafts of knowing and deciding like other tools these models are interpretable cultural objects objects that embody traditional themes of smoothness and discontinuity exchange and incommensurability parts and wholes martin krieger interprets the calculus and neoclassical economics for example as tools for adding up a smoothed world a world of marginal changes identified by those tools in contrast other models suggest that economies might be sticky and ratchety or perverted and fetishistic there are as well models that posit discontinuity or discreteness in every city for example some location has been marked as distinctive and optimal around this created differentiation a city center and a city periphery eventually develop sometimes more than one model is applicable the possibility of doom may be seen both as the consequence of a series of mundane events and as a transcendent moment we might model big decisions or entrepreneurial endeavors as sums of several marginal decisions or as sudden marked transitions changes of state like freezing or religious conversion once we take models and theory as tools we find that analogy is destiny our experiences make sense because of the analogies or tools used to interpret them and our intellectual disciplines are justified and made meaningful through the employment of characteristic toolkits a physicist s toolkit for example is equipped with a certain set of mathematical and rhetorical models marginalism and discontinuity offers a provocative and wide ranging consideration of the technologies by which we attempt to apprehend the world it will appeal to social and natural scientists mathematicians and philosophers and thoughtful educators policymakers and planners

it takes courage to do research on crime and delinquency such research is typically conducted in an atmosphere of concern about the problem it addresses and is typically justified as an attempt to discover new facts or to evaluate innovative programs or policies when as must often be the case no new facts are forthcoming or innovative programs turn out not to work hopes are dashed and time and money are felt to have been wasted because they take more time longitudinal studies require even greater amounts of courage if the potential for discovery is enhanced so is the risk of wasted effort long term longitudinal studies are thought to be especially risky for other reasons as well theories issues and sta tistical methods in vogue at the time they were planned may not be in vogue when they are finally executed perhaps worse according to some perspectives the structure of causal factors may shift during the execu tion of a longitudinal project such that in the end its findings apply to a reality that no longer exists these fears and expectations assume an ever changing world and a corresponding conception of research as a more or less disciplined search for news such ideas belittle the contributions of past research and leave us vulnerable to theories programs policies and research agendas that may have only tenuous connections to research of any kind

Incentive Effects of Social Assistance 2006

this book proposes a new two step approach to the evolution of language whereby syntax first evolved as an auto organizational process for the human conceptual apparatus as a language of thought and this language of thought was then externalized for communication due to social selection pressures anne reboul first argues that despite the routine use of language in communication current use is not a failsafe guide to adaptive history she points out that human cognition is as unique in nature as is language as a communication system suggesting deep links between human thought and language if language is seen as a communication system then the specificities of language its hierarchical syntax its creativity and the ability to use it to talk about absent objects are a mystery this book shows that approaching language as a system for thought overcomes these problems and provides a detailed account of both steps in the evolution of language its evolution for thought and its externalization for communication
