Disability and Development Report 2019-06-12

disability inclusive development is an essential condition for a sustainable future in 2015 the united nations adopted the 2030 agenda for sustainable development pledging to leave no one behind in the global efforts to realize the 17 sustainable development goals without the world s one billion persons with disabilities 15 of the world population being included as both agents and beneficiaries of development these goals will never be achieved yet persons with disabilities are still invisible and often left behind this united nations flagship report is the first publication to address at the global level the nexus between disability and the sustainable development goals it is also the first global analysis based on an unprecedented amount of data legislation and policies from over 100 countries to understand the socio economic circumstances of persons with disabilities and the challenges and barriers they face in their daily lives this report examines new areas like the role of access to energy to enable persons with disabilities to use assistive technology for which no global research was previously available and explores the linkages between the sustainable development goals and the convention on the rights of persons with disabilities as well as other international relevant norms and standards relating to disability against the backdrop of all the available evidence the report identifies good practices and recommends urgent actions to be taken for the achievement of the sustainable development goals by for and with persons with disabilities the e book for this publication has been converted into an accessible format for the visually impaired and people with print reading disabilities it is fully compatible with leading screen reader technologies such as jaws and nvda

Human Factors in Computing and Informatics 2013-06-26

this book constitutes the refereed proceedings of the first international conference on human factors in computing and

informatics southchi 2013 held in maribor slovenia in july 2013 southchi is the successor of the usab conference series and promotes all aspects of human computer interaction the 38 revised full papers presented together with 12 short papers 4 posters and 3 doctoral thesis papers were carefully reviewed and selected from 169 submissions the papers are organized in the following topical sections measurement and usability evaluation usability evaluation medical environments accessibility methodologies game based methodologies based systems and attribution research virtual environments design culture for ageing well designing for situated elderliness input devices adaptive systems and intelligent agents and assessing the state of hci research and practice in south eastern europe

Understanding Users 2023-04-17

grounded in the user centered design movement this book offers a broad consideration of how our civilization has evolved its technical infrastructure for human purpose to help us make sense of our contemporary information infrastructure and online existence the author incorporates historical cultural and aesthetic approaches to situating information and its underlying technologies across time in the collective lived experiences of humanity in today's digital environment user experience is vital to the success of any product or service yet as the user population expands to include us all designing for people who vary in skills abilities preferences and backgrounds is challenging this book provides an integrated understanding of users and the methods that have evolved to identify usability challenges that can facilitate cohesive and earlier solutions the book treats information creation and use as a core human behavior based on acts of representation and recording that humans have always practiced it suggests that the traditional ways of studying information use with their origins in the distinct layers of social science theories and models is limiting our understanding of what it means to be an information user and hampers our efforts at being truly user centric in design instead the book offers a way of integrating the knowledge base to support a richer view of use and users in design education and evaluation

understanding users is aimed at those studying or practicing user centered design and anyone interested in learning how people might be better integrated in the design of new technologies to augment human capabilities and experiences

Large Scale Projects in EHealth **2012-05-10**

the efficient and effective delivery of healthcare requires accurate and relevant methodologies ehealth projects contribute to the success and sustainability of tomorrow s health care systems efmi special topic conferences stc provide a forum for discussing achievements and experiences on specific topics in medical informatics this book presents the proceedings of the efmi stc 2012 held in moscow russia in april 2012 the theme of this stc is the implementation experience of large scale ehealth projects these large scale projects can be described by size effects complexity duration etc and are generally accompanied by small and dedicated initiatives and solutions the conference highlights large scale projects supporting the use of information and communication technology at national regional and especially at international level and aims to identify requirements for national and regional solutions in medical informatics and health information management this book provides insight into the use of information and communication technology in different countries and is designed to have a high relevance in practice and further research
