this comprehensive and authoritative text reference presents
a unique multidisciplinary perspective on shape perception in
human and computer vision rather than focusing purely on
the state of the art the book provides viewpoints from world
class researchers reflecting broadly on the issues that have
shaped the field drawing upon many years of experience
each contributor discusses the trends followed and the
progress made in addition to identifying the major challenges

everything eyes professional techniques essential tools gorgeous makeup
that still lie ahead topics and features ~~examples~~ (Read Only)

from a range of viewpoints rather than promoting a specific
paradigm discusses topics on contours shape hierarchies
shape grammars shape priors and 3d shape inference
reviews issues relating to surfaces invariants parts multiple
views learning simplicity shape constancy and shape illusions
addresses concepts from the historically separate disciplines
of computer vision and human vision using the same
language and methods
