there are few topics in sex research as compelling and confounding to researchers clinicians and the general public as that of transsexualism upending normative notions of gender eroticism and identity it poses significant scientific and clinical challenges the book addresses a fascinating and largely unexplored topic within the study of transsexualism the feelings and desires of conventionally masculine men who are attracted to women yet want to become women themselves through a collection and discussion of vivid first person narratives the book provides an in depth examination of these men s unusual propensity to be sexually aroused by the thought of themselves as women and how these men s sexual feelings influence their decisions to seek or undergo sex reassignment these narratives about autogynephilia by autogynephilic male to female mtf transsexuals provide the first comprehensive documentation of the erotic ideation that underlies the most common form of mtf transsexualism the narratives provide empirical evidence for blanchard s theory of mtf transsexual motivation and thus are of interest to researchers and theorists studying the phenomenology of mtf transsexualism the narratives are likely to be eye opening to psychologists psychiatrists physicians and other professionals who work with mtf transsexuals most

clinicians probably do not fully appreciate the erotic underpinnings of their clients condition a better understanding of their clients autogynephilic feelings and motivations would enable these professionals to provide more empathetic and effective clinical care

examine the effects of childhood trauma on sexual orientation and behavior this pioneering book examines the effects of childhood trauma including sexual abuse on sexual orientation and behavior it will help you expand your sensitivity and expertise in a critically important way by providing a nonjudgmental look at the profound effects of long standing early abuse on the sexual identities orientation behaviors and fantasies of the people who come to you for help from the editors in the modern era of trauma studies clinicians and researchers have been treating and investigating the effects of trauma including the sexual abuse of children for more than two decades and yet we know far more about sequelae such as post traumatic and dissociative symptoms disrupted attachment addictions eating disorders and somatoform symptoms than we do about the effects of trauma on sexual behavior with the exception of a relatively few articles in the scientific literature many of which were written by the authors in this collection little has been published about the sexual effects of sexual abuse and other childhood maltreatment why have we neglected

this obvious and important area perhaps the reason can be simply attributed to our victorian legacy of reluctance to openly discuss sexuality or perhaps the reason may be related to some of the expressions of sexuality that are sometimes seen in persons with childhood trauma at times expressions such as sexual addiction homosexuality sadomasochistic behavior and prostitution have been classified as deviant this may have contributed to our reluctance to discuss them openly or perhaps the reason is that we collectively wish to deny the effects of abuse on one of the core aspects of ourselves to deny that early traumatic events forever change the sexual lives of persons in such an intimate and profound way the contributors to this well referenced book combine their insight and expertise to address sensitive areas including the concepts of femininity and masculinity and how these personality styles are direct and indirect outcomes of trauma and reflective of dissociation treatment approaches for lesbian gay bisexual and transgendered trauma survivors the need to address sexuality in treatment and to always keep in mind that there are many different healthy expressions of sexuality and gender the relationship of dissociation to sexual addiction compulsivity in survivors of childhood sexual abuse sexual behavior problems in children who have been abused including sexually reactive behaviors extensive but mutual sexual behaviors and children who molest essential reading for anyone who doesn't want to see abused children mislabeled as sexual offenders hyposexuality and hypersexuality as a result of childhood trauma the relationship between trauma history trauma related symptoms and sexual risk behaviors that can lead to infection by hiv or other stds as well as unplanned pregnancy
