The Baking Answer Book *2009-10-28*

master flaky pie crusts watch your biscuits rise to new heights and present golden brown cookies every time filled with hundreds of insights and techniques the baking answer book has you covered pastry chef lauren chattman provides answers to all of your baking questions and creative ways out of every sticky mess you might find yourself in her tips tricks and secrets will take your baking to the next level

The Games Teachers Play:Activities and Resources for KS3 to PGCHE *2015-11-30*

a collection of activities and resources ranging from low to high level learning for the busy teacher from simple starter and plenary activities to complex group strategies to add the wow factor to any classroom or workshop

Applied Law *1935*

the semantic aims at allowing knowledge to be freely accessed and changed by software it is now widely recognized that if the semantic is to contain deep knowledge the need for new representation and reasoning te niques is critical these techniques need to nd the right trade o between pressiveness scalability and robustness to deal with the inherently incomplete contradictory and uncertain nature of knowledge on the the annual international conference on reasoning and rule systems rr addresses these needs and has grown into a major international forum for the discussion and dissemination of new results concerning reasoning and rule systems the rst three international conferences on reasoning and rule systems see rr conference org held in innsbruck a tria 2007 karlsruhe germany 2008 and chantilly virginia usa 2009 received enthusiastic support from the reasoning community this volume contains the papers presented at the fourth international c ference on reasoning

and rule systems rr 2010 which was held in bressanone brixen italy september 22 24 2010 and which continued the cellence of the rr series it contains nine full papers six short papers four poster position papers one phd paper and two system descriptions which wereselectedoutof31submissionsfollowinga rigorousreviewingprocess where each submission was reviewed by at least three program committee members the volumealso containsextended abstractsof the threeinvited talks tutorials

introduction to cognitive ethnography and systematic field

work by g mark schoepfle provides a guide to the

fundamentals of cognitive ethnography for qualitative

research a focus of this technique is collecting data from

flexible but rigorous interviews these interviews are flexible

because they are designed to be structured around the

semantic knowledge being elicited from the speaker not

around some pre conceived design that is based on the

researcher s background and they are rigorous because the

basic linguistic and semantic structures are shared among all cultures written by one of the founders of this technique this text provides a wealth of concentrated knowledge developed over years to best suit this collaborative and participant centric research process eight chapters show how intertwined data collection and analysis are in this method the first chapter offers a brief history and overview of the cognitive ethnography chapter 2 covers planning a research project from developing a research question to ethics and irb requirements the next two chapters cover interview background techniques and structures chapter 5 addresses analysis while chapter 6 covers transcription and translation chapter 7 covers observation while a final chapter address writing a report for both consultants and outside audiences

Guide to Nontraditional Careers in Science 1999

the power to speak naked helps everyone unleash the power

to speak the raw naked truth for those who want to advance their career increase their wage improve their social standing and skyrocket their confidence the power to speak naked gives them proven strategies to crush their fear of public speaking and empowers them to be able to speak in front of any audience anywhere at any time the power to speak naked features techniques that will make any presentation more dynamic fire up any team and give anyone the confidence to overcome their fear of public speaking within its pages sean tyler foley presents easy to read tips that make it possible for anyone to deliver a presentation that is engaging persuasive and memorable he also presents proven actionable steps that will help anyone advance in their career and life

Introduction to Cognitive Ethnography and Systematic Field Work

thisvolumeconstitutestheproceedingsofthesixthinternationalconferenceon flexible query answering systems fqas 2004 held in lyon france on june 24 26 2004 fqas is the premier conference for researchers and practitioners concerned with the vital task of providing easy exible and intuitive access to information for every type of need this multidisciplinary conference draws on several research areas including databases information retrieval knowledge representation soft computing multimedia and human computer interaction with fqas 2004 the fqas conference series celebrated its tenth anniversary as it has been held every two years since 1994 the overall theme of the fqas conferences is innovative query systems aimed at providing easy exible and intuitive access to information such systems are intended to facilitate retrieval from information repositories such as databases libraries and the these repositories are typically equipped with standard

query systems that are often inadequate for users the focus of fqas is the development of query systems that are more expressive informative cooperative productive and intuitive to use

Web and Big Data *2019-07-25*

developed from years of teaching psychiatry to medical students and residents this comprehensive text devoted solely to describing the mental status examination mse fills a void in the teaching literature and will be valuable to both students first learning about the mse and seasoned clinicians seeking an informative reference the introductory chapter offers basic advice on interviewing patients and eliciting information six major sections of the mse follow and are thoroughly described with a chapter devoted to each appearance attitude activity mood and affect speech and language thought content thought process and perception cognition and insight and judgment each chapter lists a detailed definition of reference for students describing their

findings and are an insightful review even for experienced practitioners the clinical relevance of mental status abnormalities is illustrated through frequent examples of disorders that can cause the particular signs and symptoms defined in each chapter a final chapter describing fictional case histories with hypothetical examples of written mental status reports will be particularly useful for those learning to write such reports this text is an important addition to the libraries of students and practitioners who work with psychiatric patients and should help to simplify and organize a challenging task

Evaluation of Multilingual and Multi-modal Information Retrieval

2007-09-06

in this monograph we study the problem of high dimensional indexing and systematically introduce two efficient index structures one for range queries and the other for similarity

queries extensive experiments and comparison studies are conducted to demonstrate the superiority of the proposed indexing methods many new database applications such as multimedia databases or stock price information systems transform important features or properties of data objects into high dimensional points searching for objects based on these features is thus a search of points in this feature space to support efficient retrieval in such high dimensional databases indexes are required to prune the search space indexes for low dimensional databases are well studied whereas most of these application specific indexes are not scaleable with the number of dimensions and they are not designed to support similarity searches and high dimensional joins

Records and Briefs of the United States Supreme Court *1832*

the design and functioning of an information system improve to the extent that the system can handle the questions people

ask surprisingly however researchers in the cognitive computer and information sciences have not thoroughly examined the multitude of relationships between information systems and questions both question asking and answering the purpose of this book is to explicitly examine these relationships chapter contributors believe that questions play a central role in the analysis design and use of different kinds of natural or artificial information systems such as human cognition social interaction communication networks and intelligent tutoring systems their efforts show that data structures and representations need to be organized around the questioning mechanisms in order to achieve a quick retrieval of relevant useful information

Flexible Query Answering Systems

2004-08-17

this festschrift is in honor of marilyn wolf on the occasion of her 60th birthday prof wolf is a renowned researcher and

educator in electrical and computer engineering who has made pioneering contributions in all of the major areas in embedded cyber physical and internet of things iot systems this book provides a timely collection of contributions that cover important topics related to smart cameras hardware software co design and multimedia applications embedded systems are everywhere cyber physical systems enable monitoring and control of complex physical processes with computers and iot technology is of increasing relevance in major application areas including factory automation and smart cities smart cameras and multimedia technologies introduce novel opportunities and challenges in embedded cyber physical and iot applications advanced hardware software co design methodologies provide valuable concepts and tools for addressing these challenges the diverse topics of the chapters in this festschrift help to reflect the great breadth and depth of marilyn wolf s contributions in research and education the chapters have been written by some of marilyn s closest collaborators and colleagues

The Psychiatric Mental Status Examination *1993-08-19*

designed for rapid reading this book is a condensed targeted high yield review for the american board of internal medicine certification and recertification exams content is derived primarily from interviewing hundreds of physicians who have recently taken their exams and from dr peikari s successful own the boards course for candidates by covering questions that candidates often miss such as probability estimation and triple acid base disorders the book will boost your score enough to pass the exam with ease selected homework problems and practice mini tests with answers are included a companion website provides 90 images similar to those on the exam from disciplines such as dermatology ophthalmology hematology rheumatology and cardiology

PC Mag *1989-12-12*

why a book on fault tolerant search algorithms searching is one of the fundamental problems in computer science time and again algorithmic and combinatorial issues originally studied in the context of search find application in the most diverse areas of computer science and discrete mathematics on the other hand fault tolerance is a necessary ingredient of computing due to their inherent complexity information systems are naturally prone to errors which may appear at any level as imprecisions in the data bugs in the software or transient or permanent hardware failures this book provides a concise rigorous and up to date account of different approaches to fault tolerance in the context of algorithmic search theory thanks to their basic structure search problems

offer insights into how fault tolerant techniques may be applied in various scenarios in the first part of the book a paradigmatic model for fault tolerant search is presented the ulam rényi problem following a didactic approach the author takes the reader on a tour of ulam rényi problem variants of increasing complexity in the context of this basic model fundamental combinatorial and algorithmic issues in the design of fault tolerant search procedures are discussed the algorithmic efficiency achievable is analyzed with respect to the statistical nature of the error sources and the amount of information on which the search algorithm bases its decisions in the second part of the book more general models of faults and fault tolerance are considered special attention is given to the application of fault tolerant search procedures to specific problems in distributed computing bioinformatics and computational learning this book will be of special value to researchers from the areas of combinatorial search and fault tolerant computation but also to researchers in learning and coding theory databases and artificial intelligence only basic

training in discrete mathematics is assumed parts of the book can be used as the basis for specialized graduate courses on combinatorial search or as supporting material for a graduate or undergraduate course on error correcting codes
