environmental consequences of five commodities the shadows of consumption gives a hard hitting diagnosis many of the earth s ecosystems and billions of its people are at risk from the consequences of rising consumption products ranging from cars to hamburgers offer conveniences and pleasures but as peter dauvergne makes clear global political and economic processes displace the real costs of consumer goods into distant ecosystems communities and timelines tipping into crisis people and places without the power to resist in the shadows of consumption peter dauvergne maps the costs of consumption that remain hidden in the shadows cast by globalized corporations trade and finance dauvergne traces the environmental consequences of five commodities automobiles gasoline refrigerators beef and harp seals in these fascinating histories we learn for example that american officials ignored warnings about the dangers of lead in gasoline in the 1920s why china is now a leading producer of cfc free refrigerators and how activists were able to stop canada s commercial seal hunt in the 1980s but are unable to do so now dauvergne s innovative analysis allows us to see why so many efforts to manage the global environment are failing even as environmentalism is slowly strengthening he proposes a guiding principle of balanced consumption for both consumers and corporations we know that we can make things better by driving a high mileage car eating locally grown food and buying energy efficient appliances but these improvements are incremental local and insufficient more crucial than our individual efforts to reuse and recycle will be reforms in the global political economy to reduce the inequalities of consumption and correct the imbalance between growing economies and environmental sustainability
