physics teaching and learning challenging the paradigm rise volume 8 focuses on research contributions challenging the basic assumptions ways of thinking and practices commonly accepted in physics education teaching physics involves multifaceted research based value added strategies designed to improve academic engagement and depth of learning in this volume researchers teaching and curriculum reformers and reform implementers discuss a range of important issues the volume should be considered as a first step in thinking through what physics teaching and physics learning might address in teacher preparation programs in service professional development programs and in classrooms to facilitate thinking about research based physics teaching and learning each chapter in the volume was organized around five common elements 1 a significant review of research in the issue or problem area 2 themes addressed are relevant for the teaching and learning

of k 16 science 3 discussion of original research by the author s addressing the major theme of the chapter 4 bridge gaps between theory and practice and or research and practice 5 concerns and needs are addressed of school community context stakeholders including students teachers parents administrators and community members

particle physics studies highly complex processes which cannot be directly observed scientific realism claims that we are nevertheless warranted in believing that these processes really occur and that the objects involved in them really exist this book defends a version of scientific realism called causal realism in the context of particle physics the first part of the book introduces the central theses and arguments in the recent philosophical debate on scientific realism and discusses entity realism which is the most important precursor of causal realism it also argues against the view that the very debate on scientific realism is not worth pursuing at all in the second part causal realism is developed and the key distinction between two kinds of warrant for scientific claims is clarified this distinction proves its usefulness in a case study analyzing the discovery of the neutrino it is also shown to be effective against an influential kind of pessimism according to which even our best present theories are likely to be replaced some day by radically distinct alternatives the final part discusses some specific challenges posed to realism by quantum physics such as non locality delayed choice and the absence of particles in relativistic quantum theories

the routledge companion to philosophy of physics is a comprehensive and authoritative guide to the state of the art in the philosophy of physics it comprises 54 self contained chapters written by leading philosophers of physics at both senior and junior levels making it the most thorough and detailed volume of its type on the market nearly every major perspective in the field is represented the companion s 54 chapters are organized into 12 parts the first seven parts cover all of the major physical theories investigated by philosophers of physics today and the last five explore key themes

that unite the study of these theories i newtonian mechanics ii special relativity iii general relativity iv non relativistic quantum theory v quantum field theory vi quantum gravity vii statistical mechanics and thermodynamics viii explanation ix intertheoretic relations x symmetries xi metaphysics xii cosmology the difficulty level of the chapters has been carefully pitched so as to offer both accessible summaries for those new to philosophy of physics and standard reference points for active researchers on the front lines an introductory chapter by the editors maps out the field and each part also begins with a short summary that places the individual chapters in context the volume will be indispensable to any serious student or scholar of philosophy of physics

this book presents a novel account of the human temporal dimension called the human temporality and develops a special mathematical formalism for describing such an object as the human mind one of the characteristic features of the human mind is its temporal extent for objects of physical reality only the present exists which may be conceived as a point like moment in time in the human temporality the past retained in the memory the imaginary future and the present coexist and are closely intertwined and impact one another this book focuses on one of the fragments of the human temporality called the complex present a detailed analysis of the classical and modern concepts has enabled the authors to put forward the idea of the multi component structure of the present for the concept of the complex present the authors proposed a novel account that involves a qualitative description and a special mathematical formalism this formalism takes into account human goal oriented behavior and uncertainty in human perception the present book can be interesting for theoreticians physicists dealing with modeling systems where the human factor plays a crucial role philosophers who are interested in applying philosophical concepts to constructing mathematical models and psychologists whose research is related to modeling mental processes

Applied Nuclear Physics at Accelerators

this is a follow on book to the introductory textbook physics of the solar corona previously published in 2004 by the same author which provided a systematic introduction and covered mostly scientific results from the pre 2000 era using a similar structure as the previous book the second volume provides a seamless continuation of numerous novel research results in solar physics that emerged in the new millennium after 2000 from the new solar missions of rhesi stereo hinode coronas and the solar dynamics observatory sdo during the era of 2000 2018 the new solar space missions are characterized by unprecedented high resolution imaging time resolution spectral capabilities stereoscopy and tomography which reveal the intricate dynamics of magneto hydrodynamic processes in the solar corona down to scales of 100 km the enormous amount of data streaming down from sdo in terabytes per day requires advanced automated data processing methods the book focuses exclusively on new research results after 2000 which are reviewed in a comprehensive manner documented by over 3600 literature references covering theory observations and numerical modeling of basic physical processes that are observed in high temperature plasmas of the sun and other astrophysical objects such as plasma instabilities coronal heating magnetic reconnection processes coronal mass ejections plasma waves and oscillations or particle acceleration
