in context applies the methodology that has been
developed over the last two decades in corpus
linguistics to the relatively new and still little
developed field of corpus based terminography
while corpora are already being used by some
terminologists for the identification of terms and
retrieval of contextual fragments this book
describes the first attempt to use corpora for
terminography in much the same way as large
general reference corpora are already being used
for general language lexicography the author goes
beyond the standard problem of identifying terms
as opposed to non terminological lexical items in
text and focuses on identifying metalanguage
patterns which point to the presence in text of
parts of reusable definitions of terms the author
examines these patterns and shows how the
information which they contain can be retrieved
and used as input for terminological entries terms
in context should be of interest to traditional
terminologists who have not previously considered
adopting a corpus based approach to their work or
at least not on the scale proposed here
