results with the progressive image sampler the default render time min is set to 1 0 which might be insufficient for some scenes you can reset this to 0 0 min and rendering will continue until the noise threshold is reached setting the v ray renderer 1 set v ray as the current rendering engine with the default v ray settings 2 the default settings are optimized to work universally so it is recommended to keep them progressive image sampler with 100 max subdivs and 1 min subdivs gi enabled using brute force as primary gi engine and light cache as secondary gi engine 3 you can further refine the noise levels from the progressive image sampler rollout by adjusting the noise threshold and placing a 0 value for the render time min 4 you can control the amount of aa vs shading samples for materials lights gi using the min shading rate parameter in the image sampler rollout but the default value is optimised to work well for the majority of scenes security for microsoft windows
