Iron and Steel Engineer 1996 contains the proceedings of the association

Agglomeration Processes 2008-07-11 agglomeration is integral to the processes of modification of powders production of composites and creation of new materials which are required in pharmaceuticals foods chemicals fertilizers and agrochemicals minerals ceramics metallurgy and all material producing industries the binding mechanisms and the particle behavior as well as the characteristics of the processes and the resulting agglomerates are the same whether they are occurring in the ultra clean pharmaceutical or food industries or in dirty minerals or waste processing plants the book introduces the interdisciplinary approach to the development of new concepts and the solution of problems it is a complete and up to date practical guide describing the various agglomeration phenomena and industrial techniques for size enlargement in addition to introducing the properties of agglomerates and the characteristics of the different methods descriptions of the machinery and discussions of specific equipment features are the main topics the detailed evaluation of the subject is based on the authors experience as student researcher teacher developer designer vendor and user as well as expert and consultant in the field of agglomeration its technologies and products and is complemented by the know how of colleagues who are active in specific areas and information from vendors it is intended for everybody working in industries that process and handle particulate solids as it aims to help understand and control unwanted agglomeration as well as use improve and develop methods for the beneficial size enlargement by agglomeration

Year Book - Association of Iron and Steel Engineers 1982 the definitive resource for information on air pollution emission sources and the technology available to control them the air pollution engineering manual has long been recognized as an important source of information on air pollution control issues for industries affected by the clean air act and regulations in other countries thoroughly updated to reflect the latest emission factors and control measures for reducing air pollutants this new edition provides industry and government professionals with the fundamental technological and regulatory information they need for compliance with the most recent air pollution standards contributing experts from diverse fields discuss the different processes that generate air pollution equipment used with all types of gases and particulate matter and emissions control for areas ranging from graphic arts and chemical processes to the metallurgical industry more than 500 detailed flowcharts and photographs as well as an extensive listing of internet resources accompany coverage of biological air pollution control including biofilters and bioscrubbers emissions from wood processing brick and ceramic product manufacturing pharmaceutical manufacturing numerous other industrial processes fugitive emissions internal combustion sources and evaporative losses water wastewater treatment plant emissions changes in emission factors for each source category including particle size factors related to pm10 and pm2.5 standards updated mact regulations and technologies and much more the air waste management association is the world's leading membership organization for environmental professionals the association enhances the knowledge and competency of environmental professionals by providing a neutral forum for technology exchange professional development networking opportunities public education and outreach events the air waste management association promotes global environmental responsibility and increases the effectiveness of organizations and individuals in making critical decisions that benefit society

Moody's International Manual 1997 vol 3 includes v 190 of the transactions

CIM Bulletin 1978 some issues include special catalog survey and directory number

Air Pollution Engineering Manual 2000-04-06 wann tritt agglomeration auf wie lässt sie sich vermeiden und in welchen fällen kann man sie sinnvoll nutzen ausführliche antworten auf diese fragen gibt ihnen der autor dieses bandes fachmann und berater mit langjähriger industrieerfahrung neben den traditionellen anwendungsgebieten der agglomeration unter anderem pharmazeutische industrie nahrungs und futtermittelherstellung düngerproduktion und agrochemie baustoffindustrie bergbau und metallverarbeitung werden auch aktuellste entwicklungen etwa im bereich der nanotechnologie besprochen

Iron & Steelmaker 1999-07 vols for 1970 71 includes manufacturers catalogs

Process Engineering 1982

Modern Castings 1976

Quarterly Bulletin of the Canadian Mining Institute 1978

Minerals Yearbook 1996

Mining Engineering 1971-07

Mining Journal 1976
