winner of the 2017 nobel prize in physics ever since albert einstein s general theory of relativity burst upon the world in 1915 some of the most brilliant minds of our century have sought to decipher the mysteries bequeathed by that theory a legacy so unthinkable in some respects that even einstein himself rejected them which of these bizarre phenomena if any can really exist in our universe black holes down which anything can fall but from which nothing can return wormholes short spacewarps connecting regions of the cosmos singularities where space and time are so violently warped that time ceases to exist and space becomes a kind of foam gravitational waves which carry symphonic accounts of collisions of black holes billions of years ago and time machines for traveling backward and forward in time kip thorne along with fellow theorists stephen hawking and roger penrose a cadre of russians and earlier scientists such as oppenheimer wheeler and chandrasekhar has been in the thick of the quest to secure answers in this masterfully written and brilliantly informed work of scientific history and explanation dr thorne a nobel prize winning physicist and the feynman professor of theoretical physics emeritus at caltech leads his readers through an elegant always human tapestry of interlocking themes coming finally to a uniquely informed answer to the great question what principles control our universe and why do physicists think they know the things they think they know stephen hawking s a brief history of time has been one of the greatest best sellers in publishing history anyone who struggled with that book will find here a more slowly paced but equally mind stretching experience with the added fascination of a rich historical and human component winner of the phi beta kappa award in science

cosmology is the study of the origin size and evolution of the entire universe every culture has developed a cosmology whether it be based on religious philosophical or scientific principles in this book the evolution of the scientific understanding of the universe in western tradition is traced from the early greek philosophers to the most modern 21st century view after a brief introduction to the concept of the scientific method the first part of the book describes the way in which detailed observations of the universe first with the naked eye and later with increasingly complex modern instruments ultimately led to the development of the big bang theory the second part of the book traces the evolution of the big bang including the very recent observation that the expansion of the universe is itself accelerating with time

compelling reading this book both reinforces and elevates the role of art in the exploration and analysis of the concepts of democracy globalization and capitalism in the book the author describes a post human world a state we have already entered but how should we think about it given we have already been co opted can we articulate the future outside the false discipline that the market often dictates beyond the clutches of a few social media companies and maintain our rich diversities while holding on to those things that make life possible and worthwhile love hope and art running throughout the book is the central theme of uncertainty and divergence it is uncompromising in asking the question about the need for a new global creation story which has at its core not the certainties of one defined creation myth but the need to feel comfortable with the uncertainty principle both in physics and the political economy it is up to artists scientists and philosophers to articulate this wonder and to help us write a new global creation story based on art the arts uncertainty diversity risk and wonder and of course knowledge this book has the capacity to both clarify and re shape your thinking

could ufos and aliens simply be us but from the future this provocative new book cautiously examines the premise that extraterrestrials may instead be our distant human descendants using the anthropological tool of time travel to visit and study us in their own hominin evolutionary past dr michael p masters a professor of biological anthropology specializing in human evolutionary anatomy archaeology and biomedicine explores how the persistence of long term biological and cultural trends in human evolution may ultimately result in us becoming the ones piloting these disc shaped craft which are likely the very devices that allow our future progeny to venture backward across the landscape of time moreover these extraterrestrials are ubiquitously described as bipedal large brained hairless human like beings who communicate with us in our own languages and who possess technology advanced beyond but clearly built upon our own these accounts coupled with a thorough understanding of the past and modern human condition point to the continuation of established biological and cultural trends here on earth long into the distant human future

a doctor can damage a patient as much with a misplaced word as with a slip of the scalpel in this statement from lawrence j henderson a famous physician whose name is part of the basic science of medicine epitomizes the central theme of the word as scalpel if words the main substance of human relations are so potent for harm how equally powerful they can be to help if used with disciplined knowledge and understanding nowhere does this simple truth apply more certainly than in the behavior of a physician medical sociology studies the full social context of health and disease the interpersonal relations social institutions and the influence of social factors on the problems of medicine throughout its history medical sociology divides naturally into two parts the pre modern represented by various studies of health and social problems in europe and the united states until the second world war and the modern post war period the modern period has seen rapid growth and the achievement of the full formal panoply of professionalism this engaging account documents the development of professional associations official journals and programs of financial support both private and governmental written by a distinguished pioneer in medical sociology the word as scalpel is a definitive study of a relatively new but critically important field

new technologies have opened up fresh possibilities for public diplomacy but this has not erased the importance of history on the contrary the lessons of the past seem more relevant than ever in an age in which communications play an unprecedented role whether communications are electronic or hand delivered the foundations remain as valid today as they ever have been blending history with insights from international relations communication studies psychology and contemporary practice cull explores the five core areas of public diplomacy listening advocacy cultural diplomacy exchanges and international broadcasting he unpacks the approaches which have dominated in recent years nation branding and partnership and sets out the foundations for successful global public engagement rich with case studies and examples drawn from ancient times through to our own digital age the book shows the true capabilities and limits of emerging platforms and technologies as well as drawing on lessons from the past which can empower us and help us to shape the future this comprehensive and accessible introduction is essential reading for students scholars and practitioners as well as anyone interested in understanding or mobilizing global public opinion

Hamric & Hanson's Advanced Practice Nursing - E-Book 2018-01-03

European public health was a playing field for deeply contradictory impulses throughout the twentieth century in the 1920s international agencies were established with great fanfare and postwar optimism to serve as the watchtower of health the world over within less than a decade local level institutions began to emerge as seats of innovation initiative and expertise but there was continual counterpressure from nation states that jealously guarded their policymaking prerogatives in the face of the push for cross national standardization and the emergence of original initiatives from below in contrast to histories of twentieth century public health that focus exclusively on the local national or international levels shifting boundaries explores the connections or zones of contact between the three levels the interpretive essays written by distinguished historians of public health and medicine focus on four topics the oscillation between governmental and nongovernmental agencies as sites of responsibility for addressing public health problems the harmonization of nation states agendas with those of international agencies the development by public health experts of knowledge that is both placeless and respectful of place and the transportability of model solutions across borders the volume breaks new ground in its treatment of public health as a political endeavor by highlighting strategies to prevent or alleviate disease as a matter not simply of medical techniques but political values and commitments contributors Peter Baldwin Iris Borowy James A. Gillespie Graham Mooney Lion Murard Dorothy Porter Sabine Schleiermacher Susan Gross Solomon Paul Weindling and Patrick Zylberman Susan Gross Solomon is professor of political science at the University of Toronto Lion Murard and Patrick Zylberman are both senior researchers at CERMES Centre de Recherche Médecine Sciences Santé et Société CNRS EHES INSERM Paris

the human right to healthcare has had a remarkable rise it is found in numerous international treaties and national constitutions it is litigated in courtrooms across the globe it is increasingly the subject of study by scholars across a range of disciplines and perhaps most importantly it serves as an inspiring rallying cry for health justice activists throughout the world however though increasingly accepted as a principle the historical roots of this right remain largely unexplored to heal humankind the right to health in history fills that gap combining a sweeping historical scope and interdisciplinary synthesis beginning with the age of antiquity and extending to the age of trump it analyzes how healthcare has been conceived and provided as both a right and a commodity over time and space examining the key historical and political junctures when the right to healthcare was widened or diminished in nations around the globe to heal humankind will prove indispensable for all those interested in human rights the history of public health and the future of healthcare

Public Diplomacy 2019-04-15

the commonwealth is working for the uk however if the organisation is to reach its potential and influence events the commonwealth secretariat needs to sharpen strengthen and promote its diplomatic performance recently the commonwealth has appeared less active and less publicly visible the government does not appear to have a clear and co ordinated strategy for its relations with the commonwealth the moral authority of the commonwealth has too often been undermined by the repressive actions of member governments the committee is disturbed to note the ineffectiveness of the mechanisms for upholding the commonwealth s values and expresses support for the eminent persons group s proposal for a commonwealth charter the committee also says that it is not convinced that member states are making the most of the economic and trading opportunities offered by the commonwealth the report welcomes the fact that the commonwealth continues to attract interest from potential new members and the report says that there are advantages in greater diversity and an extended global reach for the commonwealth however the application process should be rigorous there is also concern at the continuing evidence of serious human rights abuses in sri lanka and the committee urges the prime minister to state publicly his unwillingness to attend the commonwealth heads of government meeting in colombo meeting unless he receives convincing and independently verified evidence of substantial and sustainable improvements in human and political rights in sri lanka

Shifting Boundaries of Public Health 2008

our government is failing us from health care to immigration from the tax code to climate change our political institutions cannot deal effectively with the challenges of modern society why the dysfunction contemporary reformers single out the usual suspects including polarization and the rise in campaign spending but what if the roots go much deeper to the nation s founding in relic william g howell and terry m moe point to the constitution as the main culprit the framers designed the constitution some 225 years ago for a simple agrarian society but

the government they created with a parochial congress at its center is ill equipped to address the serious social problems that arise in a complex postindustrial nation we are prisoners of the past burdened with an antiquated government that cannot make effective policy and often cannot do anything at all the solution is to update the constitution for modern times this can be accomplished howell and moe argue through reforms that push congress and all its pathologies to the periphery of the lawmaking process and bring presidents whose concern for their legacy drives them to seek coherent policy solutions to the center of decision making as howell and moe reveal the key to effective government for modern america is a more powerful presidency relic is a provocative and essential book for our era of political dysfunction and popular despair it sheds new light on what is wrong with our government and what can be done about it challenging us to reconsider the very foundation of the american experiment

can women be equal to men as long as men are physically stronger and are men in fact stronger these are key questions that colette dowling author of the bestselling the cinderella complex raises in her provocative new book the myth of female frailty with its roots in nineteenth century medicine and misogyny has had a damaging effect on women s health social status and physical safety it is dowling s controversial thesis that women succumb to societal pressures to appear weak in order to seem more feminine the frailty myth presents new evidence that girls are weaned from the use of their bodies even before they begin school by adolescence their strength and aerobic powers have started to decline unless the girls are exercising vigorously and most aren t by sixteen they have already lost bone density and turned themselves into prime candidates for osteoporosis they have also been deprived of motor stimulation that is essential for brain growth yet as breakthroughs among elite women athletes grow more and more astounding it begins to appear that strength and physical skill for all women is only a matter of learning and training men don t have a monopoly on physical prowess when women and men are matched in size and level of training the strength gap closes in some areas women are actually equipped to outperform men due partly to differences in body structure and partly to the newly discovered strengthening benefits of estrogen drawing on extensive research in motor development performance assessment sports physiology and endocrinology dowling presents an astonishing picture of the new physical woman and she creates a powerful argument that true equality isn t possible until women learn how to stand up for themselves physically
