testing are the subject of serious conversation for many americans from educators to legislators however few teachers and parents view such testing as an integral part of teaching and learning testing standards of key education organizations and opinions of concerned citizens may be fleeting guides the history of testing the process for developing a formal test testing abuse misuse and limitations are not widely known or understood even though we realize that testing is critical and here to stay achievement testing explains the complicated concepts in a clear and user friendly way to beginning teachers and students as well as to experienced teachers who are looking for guidance in the ever changing educational landscape achievement tests play an important role in modern societies they are used to evaluate schools to assign students to tracks within schools and to identify weaknesses in student knowledge the ged is an achievement test used to grant the status of high school graduate to anyone who passes it ged recipients currently account for 12 percent of all high school credentials issued each year in the united states but do achievement tests predict success in life the myth of achievement tests shows that achievement tests like the ged fail to measure important life skills james j heckman john eric humphries tim kautz and a group of scholars offer an in depth exploration of how the ged came to be used throughout the united states and why our reliance on it is dangerous drawing on decades of research the authors show that while ged recipients score as well on achievement tests as high school graduates who do not enroll in college high school graduates vastly outperform ged recipients in terms of their earnings employment opportunities educational attainment and health the authors show that the differences in success between ged recipients and high school graduates are driven by character skills achievement tests like the ged do not adequately capture character skills like conscientiousness perseverance sociability and curiosity these skills are important in predicting a variety of life outcomes they can be measured and they can be taught using the ged as a case study the authors explore what achievement tests miss and show the dangers of an educational system based on them they call for a return to an emphasis on character in our schools our systems of accountability and our national dialogue contributors eric grodsky university of wisconsin madison andrew halpern manners indiana university bloomington paul a lafontaine federal communications commission janice h laurence temple university lois m quinn university of wisconsin milwaukee pedro l rodríguez institute of advanced studies in administration john robert warren university of description of each test tips for administering and scoring each test standardization norms and reliability of each scale practical guidance for the use of each test correspondence of each test to idea a practical tool designed to aid clinical psychologists in understanding the strengths and weaknesses of the various tests presented practitioner s guide to assessing intelligence and achievement provides students and practitioners with the information they need for their practice and testing efforts to be consistent with recent updates in the field and how those assessment instruments relate to changes in the laws that influence test use the nature versus nurture controversy dates back to at least the nineteenth century how much of a role does genetics or environment play in accounting for reasoning skill and other intellectual aptitudes at a time when the public school system in the united states is under attack this debate has taken center stage in arguments about what accounts for differences in academic achievement maximizing intelligence convincingly argues that while both genetics and environment play a role in a child s intelligence environmental factors especially at an early age are of primary importance working from this premise armor suggests how intelligence may be heightened armor presents four propositions about intelligence his first is that intelligence exerts a major influence on educational and occupational success following a chronological sequence from a child s cognitive skills learned before school to academic success during the school years to eligibility for college his second proposition is that intelligence can be changed at least within limits there is ample evidence that a child s intelligence is not fully given at birth but continues to evolve and change at least through the early elementary school years although at a declining rate proposition three is that intelligence is influenced by a series of risk factors and most of the influence occurs before a child reaches school age risk factors include parent intelligence and education family income family structure and size nutrition and specific parenting behaviors the fourth proposition flows from the second and third that the most promising avenues for maximizing intelligence come from a child s parents armor persuasively argues for a whole family approach whereby government programs are modified or created to inform parents of risk factors and to reward behaviors that optimize positive outcomes maximizing intelligence is meticulously researched the children born since the end of the postwar baby boom are the first in american history to come primarily from small families families of three or fewer children judith blake calls this momentous change the sibsize revolution and this book focuses on the cognitive and educational consequences to children of families of different sizes this title is part of uc press s voices revived program which **Constructing Achievement Tests** 1977 the nature versus nurture controversy dates back to at least the nineteenth century how much of a role does genetics or environment play in accounting for reasoning skill and other intellectual aptitudes at a time when the public school system in the united states is under attack this debate has taken center stage in arguments about what accounts for differences in academic achievement maximizing intelligence convincingly argues that while both genetics and environment play a role in a child s intelligence environmental factors especially at an early age are of primary importance working from this premise armor suggests how intelligence may be heightened armor presents four propositions about intelligence his first is that intelligence exerts a major influence on educational and occupational success following a chronological sequence from a child s cognitive skills learned before school to academic success during the school years to eligibility for college his second proposition is that intelligence can be changed at least within limits there is ample evidence that a child s intelligence is not fully given at birth but continues to evolve and change at least through the early elementary school years although at a declining rate proposition three is that intelligence is influenced by a series of risk factors and most of the influence occurs before a child reaches school age risk factors include parent intelligence and education family income family structure and size nutrition and specific parenting behaviors the fourth proposition flows from the second and third that the most promising avenues for maximizing intelligence come from a child s parents armor persuasively argues for a whole family approach whereby government programs are modified or created to inform parents of risk factors and to reward behaviors that optimize positive outcomes maximizing intelligence is meticulously researched
