this book contains contributions from leading researchers in biomechanics nanomechanics tribology contact mechanics materials science and applications on various experimental techniques including atomic force microscopy afm for studying soft biomimetic and biological materials and objects biologists physicists researchers applying methods of contact mechanics and researchers testing materials using indentation techniques along with many other applied scientists will find this book a useful addition to their libraries moreover several reviews in this book are written as introductions to several important and rather sophisticated research areas such as depth sensing indentation studying of biological cells by afm probes mechanics of adhesive contact and contact between viscoelastic hereditary elastic solids the book containing new theoretical models results of experimental studies and numerical simulations along with reviews of above mentioned areas of contact mechanics in application to biological systems would be beneficial for researchers in many areas of biology medicine engineering mechanics and biomimetics

the literature on cytokine genetics is vast so vast that it is now practically beyond the time or logistical constraints of most scientists to successfully keep pace with it a compilation of the latest research cytokine gene polymorphisms in multifactorial conditions brings together reviews and structures up to date information on polymorphism
