level adaptation decisions ten agricultural areas in the upper midwest region the heart of the united states corn belt were subjected to climate change and changing climate variability scenarios through simulations of future climate using results from general circulation models crop growth models calibrated to the study sites were used to simulate yields under varying climate conditions farm level production and economic analyses were performed to determine what adaptation strategies might be best utilized to maintain production and profitability for producers under conditions of global climate change and changing climate variability similar integrated analyses from australia and argentina provide comparisons from different regions

OSF/1 User's Guide 1992

arnold arnold is an advanced cross platform rendering library or api used by a number of prominent organizations in film television and animation including sony pictures imageworks it was developed as a photo realistic physically based ray tracing alternative to traditional scanline based rendering software for cg animation arnold uses cutting edge algorithms that make the most effective use of your computer s hardware resources memory disk space multiple processor cores and simd sse units the arnold architecture was designed to easily adapt to existing pipelines it is built on top of a pluggable node system users can extend and customize the system by writing new shaders cameras filters and output driver nodes as well as procedural geometry custom ray types and user defined geometric data the primary goal of the arnold architecture is to provide a complete solution as a primary renderer for animation and visual effects however arnold can also be used as a ray server for traditional scanline renderers a tool for baking procedural generation of lighting data lightmaps for videogames an interactive rendering and relighting tool
