but have far reaching implications for much of the rest of biology and they have the potential to reshape a great deal of current biological thought because taxonomy underpins much of biological methodology it is not only important that an ethologist physiologist biochemist or ecologist can obtain information about the identities of the species which they are investigating biology is also uniquely dependent on the comparative method and on the need to generalize both of these necessitate knowledge of the evolutionary relationships between organisms and it is the science of taxonomy that can develop testable phylogenetic hypotheses and ultimately provide the best estimates of evolutionary history and relationships
