2017-10-02

best selling books such as freakonomics and the undercover economist have paved the way for the flourishing economics made fun genre while books like these present economics as a strong and explanatory science the ongoing economic crisis has exposed the shortcomings of economics to the general public in the face of this crisis many people including well known economists such as paul krugman have started to express their doubts about whether economics is a success as a science as well as academic papers newspaper columns with a large audience have discussed the failure of economic to predict and explain ongoing trends the emerging picture is somewhat confusing economics made fun books present economics as a method of thinking that can successfully explain everyday and freaky phenomena on the other hand however

economics seems to fail in addressing and explaining the most pressing matters related to the field of economics itself this book explores the confusion created by this contradictory picture of economics could a science that cannot answer its own core questions really be used to explain the logic of everyday life this book was originally published as a special issue of the journal of economic methodology

Freakonomics

2005

freakonomics is a groundbreaking collaboration between levitt and stephen j dubner an award winning author and journalist they usually begin with a mountain of data and a simple question some of these questions concern life and death issues others have an admittedly freakish quality thus the new field of study contained in this book freakonomics it is true that readers of this book will be armed with enough riddles and stories to last a thousand cocktail parties but freakonomics can provide more than that it will literally redefine the way we view the modern world book jacket

by understanding how and when common sense fails we can improve our understanding of the present and better plan for the future drawing on the latest scientific research along with a wealth of historical and contemporary examples watts shows how common sense reasoning and history conspire to mislead us into believing that we understand more about the world of human behavior than we do and in turn why attempts to predict manage or manipulate social and economic systems so often go awry it seems obvious for example that people respond to incentives yet policy makers and managers alike frequently fail to anticipate how people will respond to the incentives they create social trends often seem to be driven by certain influential people yet marketers have been unable to identify these influencers in advance and although successful products or companies always seem in retrospect to have succeeded because of their unique qualities predicting the qualities of the next hit product or hot company is notoriously difficult even for experienced professionals watts argument has important implications in politics business and marketing as well as in science and everyday life
