this book contains papers presented at the international symposium on elect magnetic fields in mechatronics electrical and electronic engineering isef 07 which was held in prague the czech republic from september 13 to 15 2007 isef conferences have been organized since 1985 and from the very beginning it was a common initiative of polish and other european researchers who have dealt with electromagnetic eld in electrical engineering the conference travels through europe and is organized in various academic centres relatively often it was held in some polish city as the initiative was on the part of polish scientists now isef is much more international and successive events take place in different european academic centres renowned for electromagnetic research this time it was prague famous for its beauty and historical background as it is the place where many c tures mingle the venue of the conference was the historical building of charles university placed just in the centre of prague the technical university of prague in turn constituted the logistic centre of the conference it is the tradition of the isef meetings that they try to tackle quite a vast area of computational and applied electromagnetics moreover the isef symposia aim at combining theory and practice therefore the majority of papers are deeply rooted in engineering problems being simultaneously of a high theoretical level

a unique opportunity to review the latest progress in an expanding area of interest the mechanical behaviour of salt these proceedings include over fifty papers and summaries describing the latest findings in ongoing studies from a number of research groups for the 2007 conference there was a particular focus on the understanding of thermal mechanical hydraulic and chemical coupled processes thmc such processes are of specific interest when considering advanced problems in waste disposal storage and mining the book includes a number of themes laboratory and in situ investigations modelling e g derivation of constitutive equations numerical computations and prediction of long term behaviour thmc processes in mining projects storage and permanent disposal case studies geology mining and storage applications and abandonment the international conferences on the mechanical behaviour of salt have a long tradition being initiated in 1981 at the pennsylvania state university usa the present conference the sixth of the series took place in hannover germany in may 2007 the conference brought together mining engineers researchers and university professors interested in the mechanical behaviour of salt mostly from europe and beyond

after a brief survey of the perception of morphological change in the standard works of the hispanic tradition in the 20th century the author first attempts to refine concepts such as analogy leveling blending contamination etc as they have been applied to spanish he then revisits difficult problems of spanish historical grammar and explores the extent to which various types of morphological processes may have operated in a given change selected problems are examined in light of abundant textual evidence some include the resistance to change of sp dormir to sleep morir to die the vocalic sequence ee the reduction of the osp verbal suffixes ades edes ides odes and the uncertain origin of sp eres you are important notions such as the directionality of leveling phonological vs morphological change in the nominal and verbal paradigms the morphological spread of sound change and the role of morphological factors in apparent syntactic change are discussed

research on applying principles of quantum computing to improve the engineering of intelligent systems has been launched since late 1990s this emergent research field concentrates on studying on quantum computing that is characterized by certain principles of quantum mechanics such as standing waves interference quantum bits coherence superposition of states and concept of interference combined with computational intelligence or soft computing approaches such as artificial neural networks fuzzy systems evolutionary computing swarm intelligence and hybrid soft computing methods this volume offers a wide spectrum of research work developed using soft computing combined with quantum computing systems

the past decade has seen a rapid growth in the demand for biometric based thentication solutions for a number of applications with signi cant advances in biometric technology and an increase in the number of applications incorporating biometrics it is essential that we bring together researchers from academia and industry as well as practitioners to share ideas problems and solutions for the development and successful deployment of state of the art biometric systems the international conference on biometric authentication icba 2004 was the rst major gathering in the asia paci c region devoted to facilitating this interaction we are pleased that this conference attracted a large number of high quality research papers that will bene t the international biometrics search community after a careful review of 157 submissions 101 papers were accepted either as oral 35 or poster 66 presentations in addition to these technical presentations this conference also presented the results and summaries of three biometric competitions fingerprint veri cation competition fvc 2004 face authentication competition fac 2004 and signature veri cation competition svc 2004 this conference provided a forum for the practitioners to discuss their practical experiences in applying the state of the art biometric technologies which will further stimulate research in biometrics we are grateful to jim l wayman edwin rood raymond wong jonathon philips and francisco for accepting our invitation to give keynote talks at icba 2004 in addition we would like to express our gratitude to all the contributors reviewers program committee and organizing committee members who made this a very successful conference we also wish to acknowledge the croucher foundation the international association of pattern recognition iee hong kong section the hong kong polytechnic university the national natural science foundation in china and springer verlag for sponsoring this conference

computational intelligence ci has been a tremendously active area of search for the past decade or so there are many successful applications of ci in many sub elds of biology including bioinformatics computational nomics protein structure prediction or neuronal systems modeling and an ysis however there still are many open problems in biology that are in d perate need of advanced and e cient computational methodologies to deal with tremendous amounts of data that those problems are plagued by fortunately biology researchers are very often unaware of the abundance of computational

techniques that they could put to use to help them analyze and understand the data underlying their research inquiries on the other hand computational intelligence practitioners are often unfamiliar with the part ular problems that their new state of the art algorithms could be successfully applied for the separation between the two worlds is partially caused by the use of di erent languages in these two spheres of science but also by the relatively small number of publications devoted solely to the purpose of fac itating the exchange of new computational algorithms and methodologies on one hand and the needs of the biology realm on the other the purpose of this book is to provide a medium for such an exchange of expertise and concerns in order to achieve the goal we have solicited cont butions from both computational intelligence as well as biology researchers
