Transportation Engineering

1990

an introduction to the major areas of transportation engineering planning and management

Systems Engineering with Economics, Probability, and Statistics

2012

this title offers an overview of the fundamentals and practice applications of probability and statistics microeconomics engineering economics hard and soft systems analysis and sustainable development and sustainability applications in engineering planning

editors introduction background this is a great academic solace to see the volume on buddhist approach to responsible consumption and sustainable development which covers sub theme five of undv 2019 academic conference review of contents the world of today is suffering from the crisis of consumerism the first paper on a buddhist perspective on overconsumption and its negative effects towards society and environment deals with it specifically in the reference of consumption beyond requirements which is generally termed as overconsumption such human tendency leads to negative impact on the entire force of nature and the environment how the buddhist principles guide us to live a better life where there is least effect on the environment and society is well explained in this paper the second paper in this volume entitled attaining a sustainable society through the teachings of the khandhaka of the theravāda vinaya piṭaka is a vivid example of the benefits which one can derive from our ancient pali literature while studying the theravada vinaya pitaka the author explores the specific words of the buddha in the khandhaka which hint at the possibility of sustainability and development going together without harming other societal components though the vinaya being a pitaka for monastics it still is highly useful for the laity as well the paper buddhist ethics in the establishments of green tourism is a unique academic contribution here the writer states that the buddha s life and principles make us learn a lot as how green methods must be applied in our day to day life the damage being caused by the genre called development needs to be controlled and for this the words of master exhibits his proximity to protect nature humanity and the world order

Buddhist approach to responsible consumption and sustainable development

2002

based on the reality that today s engineers need a broad range of decision making skills this unique reference draws together into a single comprehensive volume all the fundamental principles of systems analysis both hard and soft systems economics particularly microeconomics probability and statistics that engineers need to develop a rich multifaceted perspective from which to tackle and solve complex engineering problems the emphasis throughout is on presenting the fundamental

concepts and their practical engineering applications unobscured by complicated mathematics using a large number of worked examples it integrates the power of quantitative analysis with the conceptual richness of capital budgeting and microeconomics into the elements of systems engineering coverage is broad based and applicable for engineers in practically all branches of engineering the systems approach problem solving in engineering planning basic engineering economics evaluation basic micro economics for engineers planners principles of probability probability theory random variables and probability distributions joint probability functions and correlated variables principles of statistics estimation of statistical parameters and testing validity of distribution functions hypothesis testing analysis of variance regression and correlation analysis basic hard systems engineering basic soft systems thinking analysis for civil chemical electrical environmental mechanical and industrial engineers urban planners architects and construction managers

Journal of Urban Planning and Development

1995

development in modern africa past and present perspectives contributes to our understanding of africa s experiences with the development process it does so by adopting a historical and contemporary analysis of this experience the book is set within the context of critiques on development in africa that have yielded two general categories of analysis skepticism and pessimism while not overlooking the shortcomings of development the themes in the book express an optimistic view of africa s development experiences highlighting elements that can be tapped into to enhance the condition of african populations and their states by using case studies from precolonial colonial and postcolonial africa contributors to the volume demonstrate that human instincts to improve material social and spiritual words are universal they are not limited to the western world which the term and process of development are typically associated with before and after contact with the west africans have actively created institutions and values that they have actively employed to improve individual and community lives this innovative spirit has motivated africans to integrate or experiment with new values and structures challenges and solutions to human welfare that resulted from contact with colonialism and the postcolonial global community the book will be of interest to academics in the fields of history african studies and regional studies

Transportation Congress

2001

consists of 74 papers presented at the asce s first international conference on high speed ground transportation hsgt systems held in florida usa during october 25 28 1992 many of the papers present case studies concerning different aspects of planning and engineering hsgt systems
