The Evolutionary Biology Papers of Elie Metchnikoff

2013-04-17

elie metchnikoff 1845 1916 winner of the nobel prize in 1907 for his contributions to immunology was first a comparative zoologist who working in the wake of darwin s on the origin of species made seminal contributions to evolutionary biology his work in comparative embryology is best known in regard to the debates with ernst haeckel concerning animal genealogical relationships and the theoretical origins of metazoans but independent of those polemics metchnikoff developed his phagocytosis theory of immunity as a result of his early comparative embryology research and only in examining the full breadth of his work do we appreciate his signal originality metchnikoff s scientific papers have remained largely untranslated into english assembled here annotated and edited are the key evolutionary biology papers dating from metchnikoff s earliest writings 1865 to the texts of his mature period of the 1890s which will serve as an invaluable resource for those interested in the historical development of evolutionary biology

Essential SQA Exam Practice: National 5 Biology Questions and Papers

2013

there is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses the result is an undergraduate education in biology with very little quantitative content new mathematics courses must be devised with the needs of biology students in mind in this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students the problems are sorted into three themes models processes and directions it is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the models section processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

this book is reflecting upon core theories in evolutionary biology in a historical as well as contemporary context it exposes the main areas of interest for discussion but more importantly draws together hypotheses and future research directions the modern synthesis ms sometimes referred to as standard evolutionary theory set in evolutionary biology has been well documented and discussed but was also critically scrutinized over the last decade researchers from diverse disciplinary backgrounds have claimed that there is a need for an extension to that theory and have called for an extended evolutionary synthesis ees the book starts with an introductory chapter that summarizes the main points of the ees claim and indicates where those points receive treatment later in the book this introduction to the subjects can either serve as an initiation for readers new to the debate or as a guide for those looking to pursue particular lines of enquiry the following chapters are organized around historical perspectives theoretical and philosophical approaches and the use of specific biological models to inspect core ideas both empirical and theoretical contributions have been included the majority of chapters are addressing various aspects of the ees position and reflecting upon the ms some of the chapters take historical perspectives analyzing various details of the ms and ees claims others offer theoretical and philosophical analyses of the debate or take contemporary findings in biology and discuss those findings and their possible theoretical interpretations all of the chapters draw upon actual biology to make their points this book is written by practicing biologists and behavioral biologists historians and philosophers many of them working in interdisciplinary fields it is a valuable resource for historians and philosophers of biology as well as for biologists chapters 8 20 22 and 33 are available open access under a creative commons attribution 4 0 international license via link.springer.com

biology majors and pre health students at many colleges and universities are required to take a semester of calculus but rarely do such students see authentic applications of its techniques and concepts applications of calculus to biology and medicine case studies from lake victoria is designed to address this issue it prepares students to engage with the research literature in the mathematical modeling of biological systems assuming they have had only one semester of calculus the text includes projects

problems and exercises the projects ask the students to engage with the research literature problems ask the students to extend their understanding of the materials and exercises ask the students to check their understanding as they read the text students who successfully work their way through the text will be able to engage in a meaningful way with the research literature to the point that they would be able to make genuine contributions to the literature request inspection copy contents background lake victoriawhat is calculus population modeling introduction to population modelinglogistic growthharvesting a population with logistic growtheuler s methodmodeling interlude the modeling processresearch interlude reading a research paperbrief introduction to sageprojects for population modelingdrug modeling introduction to pharmacokineticstwo models for lead in the bodymethods of drug administrationeuler s method for systems of differential equationsmodeling interlude sensitivity analysisresearch interlude writing a research paperprojects for pharmacokinetic modelingpredator prey modeling undamped lotka volterra equationsdamped lotka volterra equationspredator satiationisoclinespecies formationtop predatorsmodeling interlude potential problems with modelsresearch interlude making figuresprojects for predatory prey modelsinfectious disease modeling sir model for infectious diseasesmalariahiv aidsprojects for infectious disease modelsclassroom tested projects readership undergraduates in biomathematics mathematical biology mathematical modeling applied mathematics and dynamical systems
