this volume is the first extensive and reliable grammatical description of any traditional language of the great andamanese family akabea died out in the 1920s but was extensively documented in the late nineteenth century by two british administrators edward horace man and maurice vidal portman although neither was a trained linguist their material nonetheless provides a sufficient basis for a reliable analysis of akabea grammar especially its morphology and its phrasal and clausal syntax although there are inevitable limitations on our understanding of akabea phonology clause combining and discourse structure the grammar is accompanied by an online appendix that provides a diplomatic edition with commentary and analysis of the single most valuable resource for akabea grammatical analysis portman s dialogues raoul zamponi and bernard comrie s grammar of akabea offers a unique insight into the culture history and prehistory of the andaman islands and also broadens our understanding of the human capacity for language it highlights the typologically interesting and cross linguistically rare traits of the language such as a rich system of somatic body part prefixes and the phenomenon of verb root ellipsis whereby under certain circumstances the root of a verb may be absent leaving behind a grammatical word consisting solely of affixes the project at last makes this valuable evidence accessible both to linguists and to interested scholars from other disciplines such as anthropology history and genetics

this book offers an in depth study of the overall syntax of basilectal jamaican creole the first since bailey 1966 the author a jamaican linguist meticulously examines distributional and interpretative properties of functional morphology in jamaican creole jc from a cartographic perspective cinque 1999 2002 rizzi 1997 2004 thus exploring to what extent the grammar of jc provides morphological manifestations of an articulate ip cp and dp the data considered in this work offers new evidence in favour of these enriched structural analyses and the instances where surface orders differ from the underlying functional skeleton are accounted for in terms of movement operations this investigation of

jamaican syntax therefore allows us to conclude that the poor inflectional morphology typical of creole languages in general and of basilectal jamaican creole in particular does not correlate with poor structural architecture indeed the free morphemes discussed as well as the word order considerations that indicate syntactic movement to designated projections serve as arguments in favour of a rich underlying functional map

the highlanders of new guinea are renowned for their elaborate systems of ceremonial exchange although much has been written about them previous accounts have concentrated far less on the conduct of exchange events than on the structure of exchange systems this 1991 book deals centrally with the conduct of particular exchange events and shows through examination of them how larger social structures are reproduced and transformed as part of the emphasis on exchange as social action the book closely examines the oratory that plays a crucial part in the events basing their study on original fieldwork carried out in the nebilyer valley francesca merlan and alan rumsey focus on an inter related set of large scale compensation payments which arose out of an episode of warfare this book furthers our understanding of the interaction between social structures and historical events and particularly of the crucial role of talk it will be of special interest to anthropologists and linguists

research on language universals and research on linguistic typology are not antagonistic but rather complementary approaches to the same fundamental problem the relationship between the amazing diversity of languages and the profound unity of language only if the true extent of typological divergence is recognized can universal laws be formulated in recent years it has become more and more evident that a broad range of languages of radically different types must be carefully analyzed before general theories are possible typological comparison of this kind is now at the centre of linguistic research the series empirical approaches to language typology presents a platform for contributions of all kinds to this rapidly developing field the distinctive feature of the series is its markedly empirical orientation all conclusions to be reached are the result of a deepened study of empirical data general problems are focused on from the perspective of individual languages language families language groups or language samples special emphasis is given to the analysis of phenomena from little known languages which shed new light on long standing problems in general linguistics the series is open to contributions from different theoretical persuasions it thus reflects the methodological pluralism that characterizes the present situation care is taken that all volumes be accessible to every linguist and moreover to every reader specializing in some domain related to human language a deeper understanding of human language in general based on a detailed analysis of typological diversity among individual languages is fundamental for many sciences not only for linguists therefore this series has proven to be indispensable in every research library be it public or private which has a specialization in language and the language sciences to discuss your book idea or submit a proposal please contact birgit sievert

as one of the most central categories of the tocharian verb the subjunctive is of utmost importance for

the reconstruction of the verbal system the most rewarding domain of tocharian historical grammar
michaël peyrot provides a thorough analysis of the formation of the subjunctive in both tocharian
languages and establishes its meaning on the basis of a systematic investigation of a wealth of
published and unpublished texts a careful reconstruction of the proto tocharian stage provides a solid
base for the comparison with indo european and the derivation of the tocharian subjunctive from the
proto language with its focus on the wide variety of intricate morphological patterns the tocharian
subjunctive is at the same time a study of the whole tocharian verbal system

this book argues that syntactic parameters are set in a principled fashion on the basis of overt functional morphology the main focus of the book is on the different positions of the finite verb in the

germanic svo languages in addition other syntactic phenomena null subjects transitive expletive constructions and object shift and other language families romance semitic and slavic are discussed a common explanation for all of the discussed phenomena is proposed if and only if the features for person are distinctively marked by the agreement morphology the agreement affixes are listed separately in the lexicon and project phrases of their own in syntax where they attract the verb to the head positions and allow the specifier positions to be filled by various phonologically un realized elements special attention is given to issues of historical development and child language acquisition
