Electrical Engineering Professor RED-HOT Career; 2577 REAL Interview Questions

this book is designed to complement the two volumes electrical and electronic principles 1 and 2 due to the graded nature of the assignment questions many of them are quite demanding and will therefore also be found of use for higher national first year undergraduate studies in electrical engineering and associated bridging courses of necessity the assignment questions at the end of each chapter of most textbooks tend to concentrate solely on the topic covered by the relevant chapter however this tends to fragment the

subject matter consequently the student once tested tends to forget about earlier topics and concentrates solely on the current topic of study this effect is compounded by the current system of phase tests and assignments in preference to a comprehensive end test on completion of the unit of study the objective of this book is to present more realistic engineering problems in many cases this means that the student has to utilise knowledge gained over a range of topics in order to arrive at a solution this will help the student to view the units as a cohesive whole rather than isolated pockets of knowledge in order to enhance the integrative aspect some exercises include topics from the btec electronics syllabuses together with some elements from the electrical applications the subject matter of this last unit has considerable overlap with that of electrical and electronic principles
