Processes of Creating Space

2016-05-26

many educational practices are based upon ideas about what it means to be human thus education is conceived as the production of particular subjectivities and identities such as the rational person the autonomous individual or the democratic citizen beyond learning asks what might happen to the ways in which we educate if we treat the question as to what it means to be human as a radically open question a question that can only be answered by engaging in education rather than as a question that needs to be answered before we can educate the book provides a different way to understand and approach education one that focuses on the ways in which human beings come into the world as unique individuals through responsible responses to what and who is other and different beyond learning raises important questions about pedagogy community and educational responsibility and helps educators of children and adults alike to understand what a commitment to a truly democratic education entails

Alle Scholen

2009

utopian thought though commonly characterized as projecting a future without a past depends on golden models for re invention of what is through a detailed and innovative re assessment of the work of three architects who sought to represent a utopian content in their work and a consideration of the thoughts of a range of leading writers coleman offers the reader a unique perspective of idealism in architectural design with unparalleled depth and focus of vision on the work of le corbusier louis i kahn and aldo van eyck this book persuasively challenges predominant assumptions in current architectural discourse forging a new approach to the invention of welcoming built environments and transcending the limitations of both the postmodern and hyper modern stance and orthodox modernist architecture

Beyond Learning

2015-11-17

monumental in scale and epic in development cities have become the most visible and significant symbol of human progress the geography on and around which they are constructed however has come to be viewed merely in terms of its resources and is often laid to waste once its assets have been stripped the city in geography is an urban exploration through this phenomenon from settlement to city through physical geography which reveals an incremental progression of removing terrain topography and geography from the built environment ushering in and advancing global destruction and instability this book explains how the fall of geography in relationship to human survival has come through the loss of contact between urban dwellers and physical terrain and details the radical rethinking required to remedy the separations between the city its inhabitants and the landscape upon which it was built

Utopias and Architecture

modern schools a century of design for education is a comprehensive survey of
modern k 12 schools from frank lloyd wright to morphosis an in depth design study
that explores the fundamental relationship between architecture education and the
design of contemporary learning environments its focus is on the underlying design
themes and characteristic features that support and enhance basic aspects of
learning and in the process create an architectural expression that is both meaningful
and lasting the breadth of its scope includes influences of contemporary educational
ideas and practices related design concepts and strategies and most importantly the
resulting impact of both on real environments for learning this remarkable survey
and project study the first of its kind is an essential and important sourcebook for
architects school planners educators and anyone else interested in contemporary
school design the body of work presented which is international in scope underscores
the unique architectural potential of this important project type and highlights design
themes that remain fundamentally relevant for architects and designers today
presentation material includes more than 900 contemporary and historical
photographs mostly in color and more than 200 detailed architectural plans drawings
of schools by many of the outstanding design architects of the modern era modern
schools a century of design for education features the work of more than 60
architects worldwide including twentieth century masters frank lloyd wright alvar
aalto marcel breuer le corbusier and eliel and eero saarinen as well as

~~american societies architecture of first societies traces the different cultural~~
formations that developed in various places throughout the world to form the built environment it is the first book to explore the beginnings of architecture from a global perspective viewing ancient cultures through a lens of both time and geography this history of early architecture brings its subjects to life with full color photographs maps and drawings the author cites the latest discoveries and analyses in archaeology and anthropology and discovers links to the past by examining how indigenous societies build today encounters with modernity sections examine some of the political issues that village life and its architectural traditions face in the modern world this fascinating and engaging tour of our architectural past fills a gap in architectural education concerning early mankind the emergence of first society people and the rise of early agricultural societies presents the story of early architecture written by the coauthor of the acclaimed a global history of architecture uses the most current research to develop a global picture of human interaction and migration features color and black and white photos and drawings that show site conditions as well as huts houses and other buildings under construction in cultures that still exist today highlights global relationships with color maps analyzes topics ranging in scale from landscape and culture to building techniques helps us come to terms with our own modern approaches to historical conditions and anthropological pasts architecture of first societies is ideal reading for anyone who seeks a deeper understanding of the strong relationships between geography ecology culture and architecture

Formal Methods in Architecture and Urbanism

2018-07-27

the average lifespan of a house is somewhere around 100 years during that time it will see many mutations in household composition and related spatial rituals designers are therefore faced with the task of giving form to something that is constantly subject to change many studies into flexibility focus on the changeable on movable partitions and variation in the internal layout the present study takes not the changeable but the permanent as its departure point the permanent i e the more durable component of the house or building constitutes the frame within which change can take place while the frame defines the generic space the space in which change can occur

2006

city of play shows how play is built into the very fabric of the modern city from playgrounds to theme parks skittle alleys to swimming pools to the countless uncontrolled spaces which the urban habitat affords play is by no means just a childhood affair a myriad essentially unproductive playful pursuits have through time modelled the modern city and landscape architect and scholar rodrigo pérez de arce s erudite original and often surprising study explores a curiously neglected dimension of architectural design and practice ludic space it is an architectural history of the playground from the hippodrome to the situationist city of space released from productive ends in the pursuit of leisure but this is more than just a book about how architecture has incorporated play into its spaces and structures it is a history of the modern city itself the ludic imagination impregnated modernist ideals and what begins with the playground ends with a re consideration of the whole sweep of the modern movement through the filter of leisure and play because play is such a basic or fundamental human experience the book re grounds the architect s concerns with those of non architects and not only those of adults but also of children it seeks to give everyone architects and other ordinary city dwellers alike a better understanding about what is at stake in the making of the public spaces of our cities

each of these analysing architecture notebooks is devoted to a particular theme in understanding the rich and varied workings of architecture they can be thought of as addenda to the foundation volume analysing architecture which first appeared in 1997 and has subsequently been enlarged in three further editions examining these extra themes as a series of notebooks rather than as additional chapters in future editions allows greater space for more detailed exploration of a wider variety of examples whilst avoiding the risk of the original book becoming unwieldy as children we make places spontaneously on the beach in woodland around our homes those places are evidence of a natural language of architecture we all share beginning with the child as seed and agent of the places it makes initial sections of children as place makers illustrate the key verbs that drive that natural language of architecture later sections look at the core importance of the circle of place how as children we are drawn to inhabit boxes and the narrative possibilities that arise when place is linked with imagination the principal messages of this notebook are that it is by place making we make sense of the space of the world in which we live and that the first step in becoming a professional architect is to re awaken the innate architect inside each of us
