GreenEdge: New Perspectives to Energy Management and Supply in Mobile Edge Computing

2010-07-30

the 5g technology has been commercialized worldwide and is expected to provide superior performance with enhanced mobile broadband ultra low latency transmission and massive iot connections meanwhile the edge computing paradigm gets popular to provide distributed computing and storage resources in proximity to the users as edge services and applications prosper 5g and edge computing will be tightly coupled and continuously promote each other forward embracing this trend however mobile users infrastructure providers and service providers are all faced with the energy dilemma on the user side battery powered mobile devices are much constrained by battery life whereas mobile platforms and apps nowadays are usually power hungry at the infrastructure and service provider side the energy cost of edge facilities accounts for a large proportion of operating expenses and has become a huge burden this book provides a collection of most recent attempts to tackle the energy issues in mobile edge computing from new and promising perspectives for example the book investigates the pervasive low battery anxiety among modern mobile users and quantifies the anxiety degree and likely behavior concerning the battery status based on the quantified model a

low power video streaming solution is developed accordingly to save mobile devices energy and alleviate users low battery anxiety in addition to energy management for mobile users the book also looks into potential opportunities to energy cost saving and carbon emission reduction at edge facilities particularly the 5g base stations and geo distributed edge datacenters

sound source localization is an important research field that has attracted researchers efforts from many technical and biomedical sciences sound source localization ssl is defined as the determination of the direction from a receiver but also includes the distance from it because of the wave nature of sound propagation phenomena such as refraction diffraction diffusion reflection reverberation and interference occur the wide spectrum of sound frequencies that range from infrasounds through acoustic sounds to ultrasounds also introduces difficulties as different spectrum components have different penetration properties through the medium consequently ssl is a complex computation problem and development of robust sound localization techniques calls for different approaches including multisensor schemes null steering beamforming and time difference arrival techniques the book offers a rich source of valuable material on advances on ssl techniques and their applications that should appeal to researches representing diverse engineering and scientific disciplines
