Cisco CCNA Networking for Beginners: By Kumar Janglu Kindle Edition **2021-07-02**

networks and networking have grown exponentially over the last 15 years understandably so they have had to evolve at light speed just to keep up with huge increases in basic mission critical user needs such as sharing data and printers as well as more advanced demands such as videoconferencing unless everyone who needs to share network resources is located in the same office are which is an increasingly uncommon situation the challenge is to connect the sometimes many relevant networks together so all users can share the network s wealth ccna cisco certified network associate is an information technology it certification from cisco systems ccna certification is an associate level cisco career certification this book tries to offer you the basics of all the topics covered required for the ccna examination it includes topics like the following internetworking tcp ip subnetting vlsm cisco router and switches cisco ios operations configuration routing and routing protocols distance vector routing protocols link state and hybrid routing protocols layer 2 switching stp vlan cisco access lists internet connectivity with nat cisco wireless technologies wans ipv6 etc for more information visit kumarjanglu.com

CCNA-ICND-Prüfungshandbuch 2004

cisco ios the software that runs the vast majority of cisco routers and all cisco network switches is the dominant routing platform on the internet and corporate networks this widespread distribution as well as its architectural deficiencies makes it a valuable target for hackers looking to attack a corporate or private network infrastructure compromised devices can disrupt stability introduce malicious modification and endanger all communication on the network for security of the network and investigation of attacks in depth analysis and diagnostics are critical but no book currently covers forensic analysis of cisco network devices in any detail cisco router and switch forensics is the first book devoted to criminal attacks incident response data collection and legal testimony on the market leader in network devices including routers switches and wireless access points why is this focus on network devices necessary because criminals are targeting networks and network devices require a fundamentally different

approach than the process taken with traditional forensics by hacking a router an attacker can bypass a network s firewalls issue a denial of service dos attack to disable the network monitor and record all outgoing and incoming traffic or redirect that communication anywhere they like but capturing this criminal activity cannot be accomplished with the tools and techniques of traditional forensics while forensic analysis of computers or other traditional media typically involves immediate shut down of the target machine creation of a duplicate and analysis of static data this process rarely recovers live system data so when an investigation focuses on live network activity this traditional approach obviously fails investigators must recover data as it is transferred via the router or switch because it is destroyed when the network device is powered down in this case following the traditional approach outlined in books on general computer forensics techniques is not only insufficient but also essentially harmful to an investigation jargon buster a network switch is a small hardware device that joins multiple computers together within one local area network lan a router is a more sophisticated network device that joins multiple wired or wireless networks together the only book devoted to forensic analysis of routers and switches focusing on the operating system that runs the vast majority of network devices in the enterprise and on the internet outlines the fundamental differences between router forensics and traditional forensics a critical distinction for responders in an investigation targeting network activity details where network forensics fits within the entire process of an investigation end to end from incident response and data collection to preparing a report and legal testimony
