a home contains abstracts bibliographies and book reviews the recent surge of interest in designing validating and implementing short term tests for carcinogens has been spurred by the fairly convincing correlation between the carcinogenicity and mutagenicity of chemicals and physical agents and by the assumption that dna alteration mutations and chromosome aberrations are somehow involved in neoplastic transformation moreover it has been tacitly assumed that the mutagenic capacity alone of compounds would induce regulatory agencies to pass rules for their removal from the environment and would lead the public to avoid them the actual response however is quite different governmental departments shy away from making any decisions on the basis of in vitro test systems the public at large is becoming irritated by daily announcements that many of their cherished habits could adversely affect their health industry appears to feel threatened and may reduce its search for new beneficial chemicals the reluctance to accept wholeheartedly the mutagenicity tests for the detection of carcinogens is partly due to uncertainty about the involvement of mutations in neoplastic transformation partly due to the present difficulty of extrapolating results from various endpoints obtained on numerous organisms to man and partly due to a multitude of complex events that lead in
