spectral sequences are among the most elegant and powerful methods of computation in mathematics this book describes some of the most important examples of spectral sequences and some of their most spectacular applications the first part treats the algebraic foundations for this sort of homological algebra starting from informal calculations the heart of the text is an exposition of the classical examples from homotopy theory with chapters on the leray serre spectral sequence the eilenberg moore spectral sequence the adams spectral sequence and in this new edition the bockstein spectral sequence the last part of the book treats applications throughout mathematics including the theory of knots and links algebraic geometry differential geometry and algebra this is an excellent reference for students and researchers in geometry topology and algebra

systems engineering compilation of 37 competencies needed for systems engineering with information for individuals and organizations on how to identify and assess competence this book provides guidance on how to evaluate proficiency in the competencies defined in the systems engineering competency framework and how to differentiate between proficiency at each of the five levels of proficiency defined within that document readers will learn how to create a benchmark standard for each level of proficiency within each competence area define a set of standardized terminology for competency indicators to promote like for like comparison and provide typical non domain specific indicators of evidence which may be used to confirm experience in each competency area sample topics covered by the three highly qualified authors include the five proficiency levels awareness supervised practitioner practitioner lead practitioner and expert the numerous knowledge skills abilities and behavior indicators of each proficiency level what an individual needs to know and be able to do in order to behave as an effective systems engineer how to develop training courses education curricula job advertisements job descriptions and job performance evaluation criteria for system engineering positions for organizations companies and individual practitioners of systems

engineering this book is a one stop resource for considering the competencies defined in the systems engineering competency framework and judging individuals based off them

this report describes the maccs computer code the purpose of this code is to simulate the impact of severe accidents at nuclear power plants on the surrounding environment maccs has been developed for the us nuclear regulatory commission to replace the previously used crac2 code and it incorporates many improvements in modeling flexibility in comparison to crac2 the principal phenomena considered in maccs are atmospheric transport mitigative actions based on dose projections dose accumulation by a number of pathways including food and water ingestion early and latent health effects and economic costs the maccs code can be used for a variety of applications these include 1 probabilistic risk assessment pra of nuclear power plants and other nuclear facilities 2 sensitivity studies to gain a better understanding of the parameters important to pra and 3 cost benefit analysis this report is composed of three volumes volume i the user s guide describes the input data requirements of the maccs code and provides directions for its use as illustrated by three sample problems volume ii the model description describes the underlying models that are implemented in the code and volume iii the programmer s reference manual describes the code s structure and database management

a detailed chronology of the early pre internet years of online information systems and services every field of history has a basic need for a detailed chronology of what happened who did what when in the absence of such a resource fanciful accounts flourish this book provides a rich narrative of the early development of online information retrieval systems and services from 1963 to 1976 a period important to anyone who uses a search engine online catalog or large database drawing on personal experience extensive research and interviews with many of the key participants the book describes the individuals projects and institutions of the period it also corrects many common errors and misconceptions and provides milestones for many of the significant developments in online systems and technology

information systems science is advancing in various directions with rapid strides many diversified ideas and methodologies have

been revised and extended numerous new techniques and approaches have been conceived and developed some recent advances are covered in this series the fourth volume of this series provides in depth discussions of some newly developed theories and techniques concerning computer language level augmentation time sharing systems text editing systems grammars and automata and error correcting codes in computer arithmetic in chapter 1 v k smirnov presents an authoritative review of the augmentation of machine language level he discusses the effects of extension of computer functions upon machine language and the influence of development of software systems upon the augmentation of computer language level some specific ways of augmenting the machine language level are examined the problem of information organization storage search and retrieval in a computer is studied the introduction of higher level languages has stimulated widespread applications of computers formal language theory has been recognized as a topic of fundamental importance in the study of information systems science in chapter 2 m a harrison examines the phrase structure grammars the right linear grammars the context free grammars the lr k grammars and the context sensitive grammars the author discusses the relations between mathematical models of computers and a family of formal languages the language theory may stimulate new ideas for the augmentation of machine language level
