session training manual to help you implement this evidence based therapy in your practice as a clinician you re familiar with dialectical behavioral therapy dbt and its success in treating clients with emotion dysregulation disorders but what about clients with overcontrol disorders oc has been linked to social isolation aloof and distant relationships cognitive rigidity risk aversion a strong need for structure inhibited emotional expression and hyper perfectionism and yet perhaps due to the high value our society places on the capacity to delay gratification and inhibit public displays of destructive emotions and impulses problems linked with oc have received little attention or been misunderstood indeed people with oc are often considered highly successful by others even as they suffer silently and alone ro dbt is based on the premise that psychological well being involves the confluence of three factors receptivity flexibility and social connectedness ro dbt addresses each of these important factors and is the first treatment in the world to prioritize social signaling as the primary mechanism of change based on a transdiagnostic neuroregulatory model linking the communicative function of human emotions to the establishment of social connectedness and well being as such ro dbt is an invaluable resource for treating an array of disorders that center around overcontrol and a lack of social connectedness such as anorexia nervosa chronic depression postpartum depression treatment resistant anxiety disorders autism spectrum disorders as well as personality disorders such as avoidant dependent obsessive compulsive and paranoid personality disorder in this training manual you ll find an outline of ro dbt including history research and how it differs from traditional dbt you ll also find a session by session ro dbt outpatient treatment protocol with sections that outline the weekly one hour individual therapy sessions and weekly two and a half hour
