# International Business

2011

mike peng and klaus meyer have direct first hand experience of researching and teaching in

Europe Asia and North America this combined experience makes them uniquely qualified to write this textbook which offers a comprehensive and accessible introduction to international business that starts from Europe but ultimately encompasses the globe. The text's comprehensive coverage is accessibly arranged around one central question and two core perspectives. The central question is what determines the success and failure of firms around the globe. Institutional and resource-based perspectives are utilised to answer this question throughout the text. The very latest scholarly research is used to facilitate successful learning of the key concepts in order to engage students with the historical context and recent global developments. International Business has been shortlisted for the 2011/12 CMI Management Book of the Year award in the eBook category. More information about the CMI and the competition can be found here: [yearbook.managers.org.uk/index5.htm](http://yearbook.managers.org.uk/index5.htm)

## **Transforming Turnaround Schools in China**

2021-02-25

This book provides a holistic picture of how Chinese turnaround schools have been remarkably improved over the years and to arouse further discussion in this regard it contributes to the understanding of school improvement from a Chinese cultural perspective. It solidifies the knowledge basis of school change theories and expands the understanding of educational administration and policies in China.

## **GLOBAL**

2018

Dr Peng He in her book addresses various issues drawing on western and Chinese sources for her argument for a communicative theory of law making this book is both timely and important in the Chinese context her argument depends upon the insight that what is important in societies is not just representative democracy but voice the opportunity for individuals to be heard and bring their input into official systems more than that she argues that this can also take further the idea of living by the rules as something that is not to be seen as narrow legalism but as something more akin to living righteously a view which is resonant with parts of Chinese legal thought this book is also important in the present Chinese context in another way the developing economy necessitates substantial legal reform but applying western models to China can often be naïve and not fully fulfil their intended purpose Peng He's work addresses this by looking at the process of legislation in connection with legal reform it is grounded in a sound theoretical reflection of both the process of legal transplantation and the process of law making and looks both at western and Chinese sources such an approach needs to draw from several intellectual traditions and it is this interdisciplinary foundational research that is the task Dr He has set herself in her project her theory will provide an abstract theoretical framework that is sensitive to local conditions while at the same time incorporating insights on law reform from a broad range of disciplines her research is of direct practical relevance for reforming the legislative process in China

Professor Zenon Bańkowski  
The University of Edinburgh

## **Willingness to Communicate in the Chinese EFL University Classroom**

2014-02-26

both authors have taught the course of distributed systems for many years in the respective schools during the teaching we feel strongly that distributed systems have evolved from traditional lan based distributed systems towards internet based systems although there exist many excellent textbooks on this topic because of the fast development of distributed systems and network programming protocols we have difficulty in finding an appropriate textbook for the course of distributed systems with orientation to the requirement of the undergraduate level study for today s distributed technology specifically from to date concepts algorithms and models to implementations for both distributed system designs and application programming thus the philosophy behind this book is to integrate the concepts algorithm designs and implementations of distributed systems based on network programming after using several materials of other textbooks and research books we found that many texts treat the distributed systems with separation of concepts algorithm design and network programming and it is very difficult for students to map the concepts of distributed systems to the algorithm design prototyping and implementations this book intends to enable readers especially postgraduates and senior undergraduate level to study up to date concepts algorithms and network programming skills for building modern distributed systems it enables students not only to master the concepts of distributed network system but also to readily use the material introduced into implementation practices
