

Free epub The mouse in animal genetics and breeding research .pdf

a mouse pl mice is a small rodent characteristically mice are known to have a pointed snout small rounded ears a body length scaly tail and a high breeding rate the best known mouse species is the common house mouse *Mus musculus* mice are also popular as pets in some places certain kinds of field mice are locally common they are mouse genus *Mus* the common name generally but imprecisely applied to rodents found throughout the world with bodies less than about 12 cm 5 inches long in a scientific context mouse refers to any of the 38 species in the genus *Mus* which is the latin word for mouse mice are very nimble animals and can run very fast it has been known for a mouse to reach a speed of 7.5 miles per hour 12 kilometres per hour mice have a life expectancy of about 2-3 years mice come in lots of different colors not just white and brown and grey but over 50 different varieties of colors and shades a mouse is a small rodent with a pointed nose furry round body large ears and a long often hairless tail there are hundreds of types of mice divided into subfamilies of either old world or mice are common pests around the world although they are best described as small fast and furry they aren't all the same species today we're going to look at the most common mouse species and show you the different types of mice that you need to worry about the mouse is a small animal in the order rodentia with the most well known species being the common house mouse these mammals all have small bodies rounded ears a pointed snout a long tail and a high breeding rate house mouse *Mus musculus* rodent native to eurasia but introduced worldwide through association with humans highly adaptive the house mouse has both behavioral and physiological traits such as the ability to survive in buildings and aboard ships a tendency to move into agricultural fields and a mouse plural mice is a small rodent which is a kind of mammal it has a pointed snout small rounded ears a body length scaly tail and a high breeding rate most belong to the *Mus* genus the best known mouse species is the common house mouse *Mus musculus* usually house mice are brownish gray it is also a popular pet main characteristics the genus *Mus* currently includes 39 types amongst others the ceylon spiny mouse the african pygmy mouse and the cyprriot mouse photo creativenature.nl shutterstock species is there a difference between the house mouse and the pet mouse is the grey house mouse a pet just like the domestic cat or the dog all species of *Mus* are native to eurasia and africa where they range from lowlands to mountaintops the five species in the subgenus *Pyromys* are found in sri lanka india and mainland southeast asia much of their range originally consisted of open grasslands or grassy patches in forests the pocket mouse and the kangaroo rats and mice are members of the suborder sciuromorpha or squirrel like rodents the best known mouse species is the common house mouse *Mus musculus* it is found in nearly all countries and is also a popular pet some common breeds of mice include the house mouse deer mouse field mouse wood mouse white footed mouse etc below we will discuss each one of them in detail white footed mice scientific name *Peromyscus leucopus* one of the most abundant and widespread mammals around the globe the house mouse *Mus musculus* is found in almost any part of the world except antarctica due to human travel this rodent originated in iran afghanistan pakistan and northern india physical characteristics there are over 70 species of mice and rats widely distributed across north america the house mouse *Mus musculus* norway rat *Rattus norvegicus* and roof rat *Rattus rattus* species are in the muridae family which is the largest family of rodents and mammals in the world animals network team like their name suggests the house mouse prefers living in areas close to human habitation in fact because of humans they are one of the most successful rodent species you can find this rodent nearly worldwide read on to learn about the house mouse a house mouse caught in the kitchen run run little mouse as a general rule wild mice will only invade your home in search of food sources or winter shelter the only truly domestic mouse are the house mouse which is also the most common pet mouse no matter the species mouse droppings tend to look the same with rats having a larger version the house mouse of north america and europe *Mus musculus* is the species most commonly used for biomedical research it is likely that the mouse originated in eurasia and utilized its commensal relationship with humans to spread through to other continents as humans explored and colonized the genus *Mus* or typical mice refers to a specific genus of muroid rodents all typically called mice the adjective muroid comes from the word muroidea which is a large superfamily of rodents including mice rats voles hamsters gerbils and many other relatives though the term can be used for other rodents mice are mostly nocturnal creatures that are highly active females in particular and will often disguise their ailments so predators don't see them as weak or easy to pick off if you are sick take precautions around your pet mouse mice are very much like humans so many of the illnesses we suffer from can also affect mice the most common pet mouse is the standard white laboratory mouse although pet mice are not as inbred as some strains of lab mice taxonomy class mammalia order rodentia suborder myomorpha family cricetidae gerbils lemmings muskrats new world rats and mice voles breeds
