companies can no longer expect to engage in dubious or unethical corporate behaviour without risking their reputation and damaging perhaps irrevocably their market position irresponsible corporate behavior not only deprives shareholders of long term returns but also ultimately imposes a cost on society as a whole sustainable business is about ensuring that entities contribute toward positive social environmental and economic outcomes bad business behaviour is costly for stakeholders for markets for society and the economy alike to ensure that a company behaves well the buy in of the leadership team is crucial the full commitment of the board of directors in conjunction with the senior managers of the organization is required if an organization is to be socially responsible in this sense leadership does not reside with an individual the ceo within the organization but with all of those at the apex of corporate power and control effective change management requires enlightened and capable leadership to instigate and drive the process of embedding a sustainable and socially responsible corporate philosophy and culture that supports good business decision making a profound understanding of the requirements of

such a leadership process will help corporate managers become highly effective change agents governance will be the main driver of this change for the economy and financial markets to become sustainable and resilient radical changes in corporate leadership need to take place integrated reporting government regulation and international standards will all be important factors in bringing about this change as well as understanding the effects of corporate behavior on financial markets such an understanding is also now imperative in relation to the social and environmental contexts

this book examines the islamist radicalisation process in europe developing a new theoretical model based on an empirical study of the evolution of islamist radicals in their social environment

the approach of this book is to examine how and under what conditions people choose to radicalise it focuses on the experience of radicalisation from the perspective of those who have undergone it the study is based on trial and court material along with an extensive number of interviews collected from many different european countries and this biographical approach is used to address individuals and the details of their social environment overall the explanatory framework departs from the existing deterministic paradigm with grievances as causes also present in some psychological models and argues that radicalisation is a process much like occupational choice a rational choice made with social and ideational significance it addresses critically the assumption that because the result of the radicalisation process could be seen as abnormal the cause of it might be of a similar nature parallels are drawn with other forms of extremism and european counter radicalisation policies are considered critically this book will be of great interest to students of terrorism studies and political violence political islam social movements european politics and ir security studies in general

process safety management seeks to establish a multi level system to assess document maintain and inspect equipment and work practices integral in controlling highly toxic and or reactive materials in a highly engineered environment any variance can set off a chain of events that increases the probability of a process safety incident as violent as an explosion human behavior is often the biggest source of this variance but it can also be the biggest asset for process safety management process industries are looking to understand sources of behavioral variance and build better processes based on sound behavioral science because of this clear link between behavior and process safety performance the behavior science community has been challenged to research the behavioral root causes leading to variation that threaten process safety create and evaluate behavioral interventions to mitigate this variation and identify the system factors that

would influence the behaviors necessary to promote process safety this book seeks to translate behavior analysis into practical systems that can help reduce human suffering from catastrophic process safety events all of the chapters in this book were originally published in the journal of organizational behavior management

the theme of the present volume concerns people's response to the natural environment considered at scales varying from that of a household plant to that of vast wilderness areas our decision to focus on this particular segment of the physical environment was prompted in part by the intrinsic interest in this subject on the part of a diverse group of social scientists and professionals and of laypersons for that matter and in part by the relative neglect of this topic in standard treatments of the environment behavior field it also serves to bring out once again the interdisciplinary nature of that field and we are pleased to have been able to include representatives from geography sociology social ecology and natural recreation among our contributors we believe that this volume will serve a useful purpose in helping to integrate the findings and concepts in this presently somewhat fragmented field scattered as they are over a very diverse array of publications representing a similarly varied group of specialties it is hoped that the result will be to stimulate future development of this area and to add a measure of increased coherence to it volume 7 of our series will be devoted to the theme of elderly people and the environment with m powell lawton joining us as guest co editor the titles of the papers comprising volume 7 are shown on page v irwin altman j oachim f wohlwill ix contents introduction

psychologists offer an increasing variety of services to the public among these services psychological assessment of personality and behavior continues to be a central activity one main reason is that other mental health professionals often do not possess a high level of competence in this area and when dealing with children and adolescents psychological assessment seems to take on an even greater role therefore it follows that comprehensive graduate level instruction in assessment should be a high priority for educators of psychologists who will work with these youth this textbook is organized into three sections consistent with the authors approach to teaching part i provides students with the psychological knowledge base necessary for modern assessment practice including historical perspectives measurement science child psychopathology ethical legal and cultural issues and the basics of beginning the assessment process part ii gives students a broad review of the specific assessment methods used by psychologists accompanied by specific advice regarding the usage and strengths and weaknesses of each method in part iii we help students perform some of the most sophisticated of assessment practices integrating and communicating assessment results and infusing

assessment practice with knowledge of child development and psychopathology to assess some of the most common types of behavioral and emotional disorders in youth a text focusing on assessment practices must be updated every four to six years to keep pace with advances in test development for example several of the major tests reviewed in the text such as the behavioral assessment system for children and the child behavior checklist have undergone major revisions since the publication of the last edition making the current content outdated further another major test the conners rating scales is undergoing substantial revisions that should be completed before publication of the next edition finally the evidence for the validity of the tests and the recommendations for their appropriate use evolve as research accumulates and requires frequent updating to remain current for example there was a special issue of the journal of clinical child and adolescent psychology published focusing on evidenced based assessment of the major forms of childhood psychopathology that will need to be integrated into the chapters in part 3 this latter point reflects an important trend in the field that should influence the marketing of the book that is there are several initiatives being started in all of the major areas of applied psychology e g school clinical and counseling to promote evidenced based assessment practices these initiatives have all emphasized the need to enhance the training of graduate students in this approach to assessment this has been the orientation of this textbook from its first edition that is clinical assessment of child and adolescent personality and behavior has focused on using research to guide all recommendations for practice the ability of the textbook to meet this training need should be an important focus of marketing the book to training programs across all areas of applied psychology
