Major in Success, 5th Ed 2007-08-01

a thoroughly revised and updated edition of the leading textbook on government and business policy, presenting the key principles underlying sound regulatory and antitrust policy. Regulation and antitrust are key elements of government policy. This new edition of the leading textbook on government and business policy explains how the latest theoretical and empirical economic tools can be employed to analyze pressing regulatory and antitrust issues. The book departs from the common emphasis on institutions, focusing instead on the relevant underlying economic issues. Using state-of-the-art analysis to assess the appropriate design of regulatory and antitrust policy, extensive case studies illustrate fundamental principles and provide insight on key issues in regulation and antitrust policy. This fifth edition has been thoroughly revised and updated, reflecting both the latest developments in economic analysis and recent economic events. The text examines regulatory practices through the end of the Obama and beginning of the Trump administrations. New material includes coverage of global competition and the activities of the European Commission, recent mergers including Comcast-NBC Universal, antitrust in the new economy including investigations into Microsoft and Google, the financial crisis of 2007-2008 and the Dodd-Frank Act, the FDA approval process, climate change policies and behavioral economics as a tool for designing regulatory strategies.

a goal of mine ever since becoming an educational researcher has been to help construct a sound theory to guide instructional practice for far too long educational practice has suffered because we have lacked firm instructional guidelines which in my view should be based on sound psychological theory which in turn should be based on sound neurological theory in other words teachers need to know how to teach and that how to teach should be based solidly on how people learn and how their brains function as you will see in this book my answer to the question of how people learn is that we all learn by spontaneously generating and testing ideas idea generating involves analogies and testing requires comparing predicted consequences with actual consequences we learn this way because the brain is essentially an idea generating and testing machine but there is more to it than this the very process of generating and testing ideas results not only in the construction of ideas that work i e the learning of useful declarative knowledge but also in improved skill in learning i e the development of improved procedural knowledge
