this volume discusses a broad range of themes and methodological issues around images photography and film it is about sharing a fascination about the visual history of education and how images became the most influential circulating media within the field of education on local regional national and international levels within this volume images are primarily analyzed as presenters mediators and means of observation images are seen as mobile reproducible media which play an active role within the public and educational sphere they are means of observation and storytelling they shape identities by presenting models of how we should act in and perceive the world they circulate though different contexts and media all of which impacts their meanings

Regeneration through Sport

2022-12-01

this book examines how and why sport in general and football in particular entered the country and developed successfully between 1890 and the 1920s while placing that growth within the context of spain s larger historical experience the introduction of sport in the late 19th century permanently changed the day to day lives of thousands of spaniards initially the country s growing urban middle classes embraced the new activity as they built community identities and were introduced to it through economic and educational connections to

foreigners to justify this these proponents argued that the adoption of physical education and sport would physically regenerate the nation in response well rounded sporting communities grew developed medical arguments and even debated the activity s appropriateness for different groups like women as sport spread it produced the first football clubs around the turn of the century subsequently in the 1910s and early 1920s football established the structural institutions like stadiums stars regulatory bodies and a press that enabled its rapid expansion as a mass consumer activity in the late 1920s regeneration through sport looks at how this process embedded the sport within the national culture and established itself as a politically neutral activity before the spanish second republic allowing it to become almost ubiquitous today this book will appeal to researchers students and scholars alike who are interested in the history of sport spain and european history

this book analyses the economic history of the nuclear program in spain from its inception in the 1950s to the nuclear moratorium in the early 1980s and investigates the economic financial and business origins of atomic energy in spain the actual dimension of the spanish nuclear sector which exceeded the relative economic and political clout of the country at the time reflects the combination of domestic and foreign interests each contribution inserts the spanish case within the international development of nuclear energy but also shows how the spanish nuclear program came about how it was financed and who the main architects and beneficiaries at the industrial financial commercial and banking levels were all without losing sight of the energy policy aspects such as energy mix and energy security the volume provides useful analysis and sources for a variety of core

magnetic nanoparticles nps are finding their place in many modern technologies such as electronics memory or spintronic devices and medicine contrast media electromagnetic thermal therapy to name just a few examples the application of modern techniques based on synchrotron radiation in particular x ray spectroscopies as well as an rf transverse susceptibility probe built ad hoc allowed the author to investigate several classes of magnetic nps with diverse applications for example the interesting anisotropic properties of cow and copt nps revealed new magnetic behaviour and phases gold nps prepared on a biological template from sulfolobus acidocaldarius s layer were shown to possess intrinsic magnetism caused by the electron exchange with the sulfur atoms of the template silica and oleic acid coated

understanding of history and economics the scarcity of resources its
interplay with technology and the role of rent in explaining both
economic growth and income distribution are investigated by adopting a

there have been many significant advances in time dependent density
functional theory over recent years both in enlightening the
fundamental theoretical basis of the theory as well as in
computational algorithms and applications this book as successor to
the highly successful volume time dependent density functional theory
lect notes phys 706 2006 brings together for the first time all recent
developments in a systematic and coherent way first a thorough
pedagogical presentation of the fundamental theory is given clarifying
aspects of the original proofs and theorems as well as presenting
fresh developments that extend the theory into new realms such as

contemporary applications of the theory are discussed from real time
coupled electron ion dynamics to excited state dynamics and molecular
transport last but not least the authors introduce and review recent
advances in computational implementation including massively parallel
architectures and graphical processing units special care has been
taken in editing this volume as a multi author textbook following a
coherent line of thought and making all the relevant connections
between chapters and concepts consistent throughout as such it will
prove to be the text of reference in this field both for beginners as
well as expert researchers and lecturers teaching advanced quantum
mechanical methods to model complex physical systems from molecules to
nanostructures from biocomplexes to surfaces solids and liquids from
the reviews of lnp 706 this is a well structured text with a common
set of notations and a single comprehensive and up to date list of
references rather than just a compilation of research articles because
of its clear organization the book can be used by novices basic
