[The Ancient Origins of Consciousness](#) 2016-03-25 how consciousness appeared much earlier in evolutionary history than is commonly assumed and why all vertebrates and perhaps even some invertebrates are conscious how is consciousness created when did it first appear on earth and how did it evolve what constitutes consciousness and which animals can be said to be sentient in this book todd feinberg and jon mallatt draw on recent scientific findings to answer these questions and to tackle the most fundamental question about the nature of consciousness how does the material brain create subjective experience after assembling a list of the biological and neurobiological features that seem responsible for consciousness and considering the fossil record of evolution feinberg and mallatt argue that consciousness appeared much earlier in evolutionary history than is commonly assumed about 520 to 560 million years ago they explain the great cambrian explosion of animal diversity produced the first complex brains which were accompanied by the first appearance of consciousness simple reflexive behaviors evolved into a unified inner world of subjective experiences from this they deduce that all vertebrates are and have always been

conscious not just humans and other mammals but also every fish reptile amphibian and bird considering invertebrates they find that arthropods including insects and probably crustaceans and cephalopods including the octopus meet many of the criteria for consciousness the obvious and conventional wisdom shattering implication is that consciousness evolved simultaneously but independently in the first vertebrates and possibly arthropods more than half a billion years ago combining evolutionary neurobiological and philosophical approaches allows feinberg and mallatt to offer an original solution to the hard problem of consciousness

Origin and Transformation of the Ancient Israelite Festival Calendar 2005 the book focusses on the origin and transformation of the priestly festival calendar since the epoch making work of julius wellhausen at the end of the 19th century the differences between the various ancient israelite festival calendars have often been explained in terms of a gradual evolution which shows an increasing historicisation

denaturalisation and ritualisation the festivals were in wellhausen's view gradually detached from agricultural conditions and celebrated more and more at fixed points in the year this study tries to show that the changes in the priestly festival calendar reflect a conscious effort to adapt the ancient israelite festival calendar to the semi annual layout of the babylonian festival year the ramifications of the change only come to the fore after a careful study of the agricultural conditions of ancient israel and mesopotamia makes clear that passover and the festival of unleavened bread were originally celebrated in the second month of the year the first month of the year envisaged by the priestly festival calendar for the celebration of passover and the festival of unleavened bread in turn mirrors the date of one of the two semi annual babylonian new year festivals the two babylonian new year festivals were celebrated exactly six months apart at the vernal and autumnal equinoxes in order to adapt the ancient israelite festival calendar to the babylonian scheme with two new year festivals a year the date of passover and the festival of unleavened bread had to be moved up by one month the consequences for the origin of passover the festival of unleavened bread the festival of weeks and the festival of huts are charted and the relations between the various ancient israelite festival calendars are determined anew

The Origins and Character of the Ancient Chinese City 2017-07-12 these two volumes elucidate the manner in which there emerged on the north china plain hierarchically structured functionally specialized social institutions organized on a political and territorial basis during the second millennium b c they describe the way in which during subsequent centuries these institutes were diffused through much of the rest of north and central china author paul wheatley equates the emergence of the ceremonial center as evidenced in shang china with a functional and developmental stage in urban genesis and substantiates his argument with comparative evidence from the americas mesopotamia egypt southeast asia the mediterranean and the yoruba territories the origins and character of the ancient chinese city seeks in small measure to help redress the current imbalance between our knowledge of the contemporary western style city on the one hand and of the urbanism characteristic of the traditional world on the other those aspects of urban theory which have been derived predominantly from the investigation of western urbanism are tested against rather than applied to ancient china the origins and character of the ancient chinese city examines the cosmological symbolism of the chinese city constructed as a world unto itself it suggests with a wealth of argument and evidence that this cosmo magical role underpinned the functional unity of the city everywhere until new bases for

urban life began to develop in the hellenistic world whereas the majority of previous investigations into the nature of the chinese city have been undertaken from the standpoint of elites the origins and character of the ancient chinese city has adopted a point of view closer to that of the social scientist than the geographer

**Rewriting Ancient Jewish History** 2016-04-20 half a century ago the primary contours of the history of the jews in roman times were not subject to much debate this standard account collapsed however when a handful of insights undermined the traditional historical method the method long enlisted by historians for eliciting facts from sources in response to these insights a new historical method gradually emerged rewriting ancient jewish history critiques the traditional historical method and makes a case for the new one illustrating how to write anew ancient jewish history at the heart of the traditional historical method lie three fundamental presumptions the traditional historical method regularly presumes that multiple versions of a text or tradition are equally authentic it presumes that many ancient jewish sources are the products of largely immanent forces of cloistered jewish communities and barring any local grounds for suspicion it presumes that most ancient jewish texts faithfully reflect their sources and reliably recount events rewriting ancient jewish history unfurls the failings of this approach it promotes the new historical method which circumvents the flawed traditional presumptions while plotting anew the limits of rational argumentation in historical inquiry this crucial reappraisal is a must read for students of jewish and roman history alike and a fascinating case study in how historians should approach their ancient sources

*Ancient Egypt in Africa* 2003-08-13 the discipline of egyptology has been criticised for being too insular with little awareness of the development of archaeologies elsewhere it has remained theoretically underdeveloped for example the role of ancient egypt within africa has rarely been considered jointly by egyptologists and africanists egypt's own view of itself has been neglected views of it in the ancient past in more recent times and today have remained underexposed encounters with ancient egypt is a series of eight books which addresses these issues the books interrelate inform and illuminate one another and will appeal to a wide market including academics students and the general public interested in archaeology egyptology anthropology architecture design and history geographically egypt is clearly on the african continent yet ancient egypt is routinely regarded as a non african cultural form the significance of ancient egypt for the rest of africa is a hotly debated issue with complex ramifications this book considers how ancient egypt was

dislocated from africa drawing on a wide range of sources it examines key issues such as the evidence for actual contacts between egypt and other early african cultures and how influential or not egypt was on them some scholars argue that to its north egypt s influence on mediterranean civilization was downplayed by western scholarship further afield on the african continent perceptions of ancient egypt were coloured by biblical sources emphasizing the persecution of the israelites an extensive selection of fresh insights are provided several focusing on cultural interactions between egypt and nubia from 1000 bce to 500 ce developing a nuanced picture of these interactions and describing the limitations of an egyptological approach to them

A Manual of Ancient and Modern History 1857 this volume represents a multi faceted

cross period product of fieldwork conducted in contemporary greece in combination with ancient sources based on a comparative analysis of important religious festivals and life cycle rituals the book investigates the importance of cults connected with the greek female sphere and its relation to the official male dominated ideology within these festivals are encountered supplementary complementary or competing ideologies connected with men and women and it is shown that there is not a one way power structure or male dominance within greek culture but rather competing powers linked to the two sexes and their respective spheres in addition to gender the book also explores the relationship between the great and little societies in the form of official and popular religion as such it will serve to broaden the reader s knowledge of ancient but also modern society because it concerns the relationship between various spheres of life which each possess their own competing and overlapping but also co existing value systems

**The Politics of Aristotle** 1885 this book endeavours to pinpoint the relations between musical and especially instrumental practice and the evolving conceptions of pitch systems it traces the development of ancient melodic notation from reconstructed origins through various adaptations necessitated by changing musical styles and newly invented instruments to its final canonical form it thus emerges how closely ancient harmonic theory depended on the culturally dominant instruments the lyre and the aulos these threads are followed down to late antiquity when details recorded by ptolemy permit an exceptionally clear view dr hagel discusses the textual and pictorial evidence introducing mathematical approaches wherever feasible but also contributes to the interpretation of instruments in the archaeological record and occasionally is able to outline the general features of instruments not directly attested the book will be indispensable to all those interested in greek music technology and performance culture and the general history of musicology

Greek Festivals, Modern and Ancient 2017-06-20 this unique new work of reference

traces the origins of the modern laws of warfare from the earliest times to the present day relying on written records from as far back as 2400 bce and using sources ranging from the bible to security council resolutions the author pieces together the history of a subject which is almost as old as civilisation itself the author shows that as long as humanity has been waging wars it has also been trying to find ways of legitimising different forms of combatants and ascribing rules to them protecting civilians who are either inadvertently or intentionally caught up between them and controlling the use of particular classes of weapons that may be used in times of conflict thus it is that this work is divided into three substantial parts volume 1 on the laws affecting combatants and captives volume 2 on civilians and volume 3 on the law of arms control this second book on civilians examines four different topics the first topic deals with the targeting of civilians in times of war this discussion is one which has been largely governed by the developments of technologies which have allowed projectiles to be discharged over ever greater areas and attempts to prevent their indiscriminate utilisation have struggled to keep pace the second topic concerns the destruction of the natural environment with particular regard to the utilisation of starvation as a method of warfare and unlike the first topic this one has rarely changed over thousands of years although contemporary practices are beginning to represent a clear break from tradition the third topic is concerned with the long standing problems of civilians under the occupation of opposing military forces where the practices of genocide collective punishments and or reprisals and rape have occurred the final topic in this volume is about the theft or destruction of the property of the enemy in terms of either pillage or the intentional devastation of the cultural property of the opposition as a work of reference this set of three books is unrivalled and will be of immense benefit to scholars and practitioners researching and advising on the laws of warfare it also tells a story which throws fascinating new light on the history of international law and on the history of warfare itself

Sacred and Public Land in Ancient Athens 2011-10-13 analyses of big datasets signal important directions for the archaeology of religion in the archaic to mississippian native north america across north america huge data accumulations derived from decades of cultural resource management studies combined with old museum collections provide archaeologists with unparalleled opportunities to explore new questions about the lives of ancient native peoples for many years the topics of technology economy and political organization have received the most research attention while ritual religion and symbolic expression have largely been ignored this was often the case because researchers considered such topics beyond reach of their methods and data in archaeology and ancient religion in the american midcontinent editors brad h koldehoff and timothy r pauketat and their contributors demonstrate that this notion is outdated through their analyses of a series of large datasets from the midcontinent ranging from tiny charred seeds to the cosmic alignments of mounds

they consider new questions about the religious practices and lives of native peoples at the core of this volume are case studies that explore religious practices from the cahokia area and surrounding illinois uplands additional chapters explore these topics using data collected from sites and landscapes scattered along the mississippi and ohio river valleys this innovative work facilitates a greater appreciation for and understanding of ancient native religious practices especially their seamless connections to everyday life and livelihood the contributors do not advocate for a reduced emphasis on technology economy and political organization rather they recommend expanding the scope of such studies to include considerations of how religious practices shaped the locations of sites the character of artifacts and the content and arrangement of sites and features they also highlight analytical approaches that are applicable to archaeological datasets from across the americas and beyond
